....Po Our Customers

AND THE

·····General Public—

Our Catalogue for 1896-1897 has been carefully revised, and will be found to contain many new varieties of great merit; it also contains much valuable information, including a table and calendar of operations specially adapted to the climate of Southern California, which is a valuable feature. This catalogue will be found the most useful and reliable guide for amateurs published on this coast.

Testing.—Our Seeds, on arrival, are immediately, thoroughly and carefully tested, by count, and only those stocks that grow a very strong percentage are kept in stock and sent out. Those of inferior growth are at once returned and charged back to the growers.

Sources of Supply.—Our sources of supply are world-wide. Whenever California grown seeds are obtainable, and will prove equal in quality to Eastern and European seeds, we prefer them, on account of their superior germinating power.

In the case of Cabbages, Cauliflowers, and some other seeds, we find that those saved in colder climates are *surer to head*, and so we contract with the most reliable Eastern and European growers for them.

This Catalogue will be found to contain only those varieties of approved worth in this climate. We have carefully weeded out those kinds that, from our own experience, do not succeed well in this section.

• Prices.—Our prices are on the whole more favorable to the customer this season than at any time in the past, and we believe will compare favorably with other reliable houses. Our seeds are of strictly first quality, and may be thoroughly relied upon.

Notwithstanding the universal business depression of the past year, our business showed a fair advance on the previous one, which we attribute to the fact that we sell reliable seeds at reasonable prices. Poor and inferior seeds of doubtful quality, are worse than worthless to the buyer, as he loses not only the time and labor expended, but the season, also. Poor, cheap seeds are the dearest in the end.

The prices annexed to Vegetable Seeds by the pound, to Beans, Peas, Corn, Grass and Clover Seeds, Bird Seeds, Agricultural Seeds of all kinds, and Onion Sets, being regulated by the Eastern markets, will be liable to fluctuation, and we cannot bind ourselves to fill orders at the prices herein given for the entire season.

Our Flower Seed list has been thoroughly revised, and instructions especially suited for this section of the country have been appended by a skilled botanist. Descriptions are also added, as fully as space will allow in a Seed Catalogue

In Our List of Eucalypti will be found several varieties which as yet are little known in California. We have endeavored to classify the *Eucalypti* according to their uses, and hope it will simplify the work of selection of varieties to our customers.

Our Tree, Shrub and Palm Seeds are specially collected for us in different parts of the world, and as they ripen at various seasons, orders for them will be filled as far as possible, and any varieties not on hand will be booked and immediately forwarded on arrival of New Seeds.

Our Trade in Alfalfa, Clover, Grass, and all other agricultural seeds is the largest in this section, and everything is supplied clean and true to name.

Our List of Horticultural Tools and Requisites will commend itself. Therein will be found everything that will economize time and labor in garden, field and orchard operations, also all the most effective Insecticides and Fertilizers.

Non-Warranty of Seeds.—We exercise the utmost care and vigilance in testing all seeds sold by us, but owing to uncontrollable influences and accidents, (such as bad weather, improper soil, insects, etc..) the best seeds will sometimes fail. We have, therefore, in common with all other large seed firms in the United States—members of the American Seed Trade Association—adopted the following disclaimer: "While we exercise the greatest care to have all seeds pure and reliable, we do not give any warranty, express or implied. If the purchaser does not accept the seeds on these terms and conditions they must be returned at once, and the money that has been paid for the same will be refunded." Our customers may, however, rest assured that we shall sell none but the best seeds, both as to germinating power and purity of stock.

Instructions to Correspondents.

How to order. With this catologue is enclosed an "Order Sheet" which explains itself, and which we request all our customers to use. Should our customers require more order sheets we will, at all times, mail them free on application. Please remember to write your Name, Post Office, County and State as distinctly as possible, especially the name; also the nearest Express Office, or, if on stage route send us the special directions, giving us the name of the Express Company delivering goods, when ordered to be shipped in this way. When these conditions are complied with, we will guarantee the safe arrival, in good condition, of all goods shipped by us.

How to Remit. We decline sending perishable goods, as bulbs and plants, C. O. D., unless a remittance of 50 per cent. cccompanies the order, to insure us against loss. Orders from unknown correspondents must be accompanied by cash, or satisfactory reference. Cash may be remitted by Post Office Order, Registered Letter, or, in case of large sums, by Express. Small sums of less than one dollar may

be forwarded in postage stamps.

Mode of Forwarding. We will forward, free by Mail, to any part of the United States, at the retail price annexed, all Vegetable, Tree and Flower Seeds, with the exception of Beans, Corn and Peas, and where otherwise noted, for either of which ten cents per pound must be added, when ordered by mail. We, however, reserve the right to send parcels of seeds by Express, prepaid, when it is to our advantage. All Bird, Grass, Clover and other Agricultural Seeds, when ordered by Mail, will be subject to a charge of ten cents per pound for Postage. When Postage is not added these goods will be sent by Express or Freight at purchaser's expense.

Order Early. We would advise our customers to order early, as in the press of the busy season

it is sometimes impossible to fill orders the same day as received.

We issue a Wholesale Price List to Dealers and Storekeepers, which will be mailed on application, if business card is enclosed.

This catalogue will be mailed free to all our customers. Non-customers will please, on application, enclose 10 cents to cover postage which may be deducted from first order amounting to one dollar

We also publish a separate Catalogue of Dutch and other Bulbs, and a list of Plants, which will be mailed free on application.

Soliciting your esteemed orders, which shall have careful and prompt attention, we are, yours faithfully, GERMAIN FRUIT COMPANY,

Seed Merchants.

Los Angeles, Cal., November 1st, 1896.

A Few Simple Rules for Successful Seed Sowing and Vegetable Raising.

First. Choose the location for your garden on a sheltered, sunny slope, if possible, and with thorough drainage.

Second. Do not attempt too much. Two acres well cultivated will produce more than five under slovenly cultivation.

Third. Fertilize liberally before plowing or harrowing.

Fourth. Cultivate deeply, viz.: from 15 to 20 inches.

Fifth. Sow in drills, in preference to broadcast.

Sixth. Plow deeply and repeatedly and work the soil to as fine a tilth as possible before planting. Seventh. Keep weeds down. The old adage, "One year's seeding makes seven year's weeding is correct.

Eighth. Cultivate frequently. Good tillage always pays, and prevents the soil from baking. Ninth. Attend strictly to Rotation of Crops. Do not let two tap-rooted crops, (as Carrots and Parsnips) follow each other, nor two exhaustive Head Crops, (as Cabbages and Cauliflowers). Let the soil have time to recuperate its exhausted fertility. Follow Carrots, for instance, with a surface, shallow feeding crop, as Peas, or Vine crops, as Melons and Squashes.

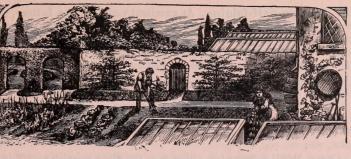

Tenth. Water in drills, and copiously; slight sprinklings overhead do more harm than good.

Eleventh. Watch closely for insects. Hammond's "Slug Shot" is very valuable to dust over young plants, as it is only destructive to insects, and is innocuous to larger forms of animal life. It does not harm poultry, and acts on the plant as a fertilizer.

Twelfth. Buy your seeds only from a reliable seed house, whom you are sure test before sending

them out, and supply only varieties true to name.

1896

List of Novelties

AND VARIETIES OF SPECIAL MERIT.

These are all expected to be on hand by December 1st, but should we not possess any variety ordered, we will book it, and forward the same immediately on arrival.

Vegetable Seeds.

- BEET. Germain's Long Blood. (See cut) A splendid variety of fine flavor, and being of long symmetrical shape is more easily sliced than the round varieties, and therefore one of the very best for family use. Per pkt., 5c; per 1b., 6oc.
- BEET, Crosby's Egyptian Turnip-rooted, A new, dark red, Turnip-shaped variety of excellent quality, a valuable novelty. Per pkt. 10c.
- CABBAGE, Early Newark Improved Flat Dutch. A new Drumhead variety of great merit, produces large, solid heads of fine quality, one of the best sorts for shipping purposes. Per pkt., 10c.
- CABBAGE, Superfine Early York. An improvement on Early York, an extra fine variety of compact growth, very early and of excellent quality. Per pkt. 10c.
- CARROT, Early Nantes Stump-Rooted. The earliest of all the Half-long Carrots and the very best variety for forcing. Almost cylindrical in shape, with very smooth skin, the flesh of the root is entirely red, sweet and mild, and almost if not wholly devoid of the yellow core seen in most red carrots. A splendid table variety and one of the best yet introduced. Per pkt. 10c.
- CELERY, Carter's Incomparable Crimson. A dwarf variety of great merit, of rich color, very crisp and delicious flavor. Per pkt. 10c.
- CELERY, Sandringham Dwarf White. A superior variety, solid, crisp and of excellent flavor. Per pkt. 10c.
- CHICORY, Witloof. Has very broad leaves, with large ribs or stalks which is its chief merit When blanched this forms the vegetable which the Belgians call withof. In appearance it much resembles a blanched head of Cos Lettuce. Germain's Long Blood Beet Per pkt. 10c.

- CORN SWEET, Country Gentleman. A new variety of great merit, very productive often yielding 3 or 4 ears on a stalk. The ears are very handsome, from 8 to 9 inches in length and very at tractive for the table. The kernels are 'pearly white, deep, and on a very [small cob, and unsur passed for quality and delicious flavor. Per lb., 15c.
- CUCUMBER, White Apple-Shaped. A variety just introduced from Australia. Fruit round, and of better flavor than any other variety. It is claimed by the Australians that this is the most wholesome of all cucumbers, persons who dare not eat any other variety being able to eat this one with safety. Per pkt., 15c.
- ENDIVE, Broad-leaved Winter. Remarkable for having much larger and broader leaves than any other variety, being almost as broad as long, and cut at the edges with numerous teeth. Quite distinct, an extra fine variety. Per pkt., 10c.

- LETTUCE, Trianon Self-folding. An excellent variety of Cos Lettuce, the leaves fold in of themselves and bleach quickly, and therefore do not require tying up as the other varieties. Large, crisp, tender, and of fine flavor. Resists warm weather and is probably the best Cos Lettuce yet introduced. A great favorite in Europe. Per pkt., 10c.
- LETTUCE, Lee's Immense. The largest Lettuce of late introduction, of excellent quality, crisp and tender. Per pkt., 10c.
- PUMPKIN, Iron Bark. A new variety from Australia, and a great favorite with the colonists there. It is used for table exclusively. Color gray externally, with yellow flesh; an excellent keeper, very prolific. The pumpkins weigh from 7 to 10 pounds each, and have a very hard shell. The plants do not require more than half the room usually given to the Mammoth Pumpkin. Per pkt., 10c; 0z., 50c.
- RADISH, Long White Spanish. Similar to the Black Spanish except in color, crisp and solid. A valuable winter variety. Per pkt. 10c.
- TOMATO, New Stone. A splendid variety for shipping, of bright scarlet color, large, smooth and firm, of excellent quality and one of the best for general use. Per pkt., roc.
- TOMATO, Royal Red. An excellent variety for main crop, is of a beautiful deep red color, and one of the best for canning purposes, or general use. Large, round, and very handsome. Per pkt., 10c.
- TURNIP, Jersey Lily. The earliest white garden turnip grown, perfectly round in shape, has a very small top, and single tap-root, and is of delicate flavor. A very valuable novelty. Per pkt. 10c.

Seeds of New and Valuable Field Plants.

- NEW AUSTRALIAN SALT BUSH. "OLD MAN." This is a distinct species, and quite different from the Atriplex semibaccatum already known in California. It succeeds on alkali land as well as, and withstands drought better than the latter kind, while on account of its upright growth (growing sometimes 15 feet high) it is easily cut. In its immense productiveness it is far ahead of the common kind, while its leaves are much larger. We are informed by our correspondent in Australia that the cattle men in that country prefer the "Old Man" to any other kind for cattle, while the A. semibaccatum is used for sheep and the smaller animals, on account of its being more easily reached by them. Plant in hills 6 feet apart each way, several seeds to a hill, thinning out to the two strongest plants. Per pkt., 20c; per 0z., 60c; per 1b, \$6.00.
- ATRIPLEX LEPTOCARPA. This is another species of Salt Bush now finding its way into California. It is said to withstand much drought, and succeeds well on alkali land. Has larger leaves than A. semibaccatum, is very productive and valuable for stock feed. Native of Eastern Australia. Per pkt., 15c; per oz., 5oc.
- ATRIPLEX HALIMOIDES. A species of Salt Bush highly recommended by the Australians. Succeeds well on alkali soil and resists drought. Sheep and hogs are said to be very fond of this variety. Per pkt., 15c; per oz., 5oc.
 - For Atriplex semibaccatum (Australian Salt Bush) see General List of Fodder Plants.
- NEW SUGAR BEET. "Carter's Sugar Cane." This variety has been selected for its richness in saccharine matter; is of medium size, and has a clean habit of growth, rendering it easy to lift; is equally valuable, whether used for production of sugar or grown for stock feeding purposes. Per lb, 20c; per 100 lbs, \$12.50. If ordered by mail, add 10c per lb. for postage.
- **CANAIGRE.** (Rumex hymenosephalus.) A plant which is now receiving much attention, and the cultivation of which is becoming a large industry both in Arizona and California, on account of the tannin contained in the roots. It belongs to the Dock family and is a native of California and Mexico, grows from one to three feet high and produces tubers in great abundance, is easily cultivated, and said to be a very profitable crop. Price on application.

Sacaline.

(Polygonum Sachalinense.)

This hardy perennial has been some time in cultivation as an ornamental plant. It is a native of the Saghalien Islands, and is said to resist the utmost extremes of heat and cold, and may be grown on the poorest soil. It grows to the height of ten or twelve feet, and may be cut three times a year. The stems and leaves, which are very nutritious, are greedily eaten by cattle and sheep. The seed should be started in boxes, and the young plants afterwards transplanted three feet apart each way.

Per pkt., 15c; per oz., 5oc; per lb, \$5. Roots in season, each, 15c; per 100, \$12.50.

Flower Speds.

NOVELTIES AND VARIETIES OF SPECIAL MERIT, 1896, 1897.

Some of these varieties have been offered by us in previous lists, but being very valuable and little known, we again offer them as possessing special merits.

Amaranthus Superbus. - Coleus Leaved Amaranthus, A valuable acquisition in the line of new decorative plants. It grows to the height of from 3 to 5 feet, and is clothed with a profusion of large, cordate, crumpled leaves; dark crimson in color, with a broad light green margin. Per pkt, 25c.

Carnation. - Early Double Snow White. Said to be as hardy and vigorous as the old "Grenadin," but more bushy and compact. It is an early and abundant bloomer, and the flowers produced are perfectly double and deliciously fragrant. This new variety promises to become very popular. Per pkt, 50c.

California Poppy. Rose Cardinal. A charming new variety of California Poppy bearing large rose colored flowers. Per pkt., 15c.

Dahlia, Cactus. Though this class of Dahlias are known here they are deserving of more extensive cultivation. They produce flowers of remarkable beauty, with the petals gracefully curved and quilled, and loosely arranged, and are less formal than the old double varieties. They are now very popular in England and Europe, where they have received much attention and development, which has resulted in the production of a marvelous variety, both in form and color. The strain we are offering is obtained from one of the most prominent European growers and we believe it to be unsurpassed for beauty and variety of color. Per pkt., 25c.

Delphinium Cardinale. (Scarlet Larkspur.) A beautiful native perennial species growing from 5 to 8 feet high and bearing large spikes of bright scarlet flowers. Per pkt., 15c.

Gunnera Scabra. This is not new, but is almost as little known as if it were. It is a magnificent plant for single specimens on large lawns or in parks. The leaves are large and handsome, measuring from 4 to 5 feet in diameter, and are borne on stout, prickly leaf-stalks from 3 to 6 feet long. The flowers are produced in dense club-shaped spikes. A splendid plant, and one that is easily cultivated, where sunshine and water are plentiful. Per pkt., 25c.

Ipomæa Hookeri. It is not too much to pronounce this one of the most magnificent of all the "Morning Glories" or "Moon-Flowers." For those who wish to cover a porch or trellis quickly it is unsurpassed on account of its rapid growth and large heart-shaped leaves. It does not usually flower till the fall, but then it makes up for its tardiness by an unusual profusion of large purplish blue flowers, three or four on a stem. A really superb climber, Per pkt., 15c.

Imperial Japanese Morning Glories. These magnificent Morning Glories produce immense flowers from 4 to 6 inches across, and are of greater substance than the common kind and remain open longer; they are of every imaginable shade, from soft pink to bright crimson, maroon and bronze, light blue to indigo, and purplish black, pure white or silvery gray, some are beautifully spotted and striped, shaded and daintily tinted, while others have white, pink or red throats. The vines are of robust growth, attaining a height of from 30 to 50 feet The foliage is handsome and luxuriant and of various shades, light and dark green, yellow, or silvery gray, some are beautifully spotted and blotched with white or gray. The great variety of colors both in flowers and foliage when the vines are intermingled together presents a strikingly beautiful appearance.

Per pkt., 25c.

Nasturtium Lilliput. (Tropævlum Lobbianum compactum.) (See cut.) An entirely new class of Dwarf Nasturtiums, in every respect smaller than the Tom Thumbs. The dainty little flowers appear well above the small cut foliage, and are of the most varied and showy colors, there appearing some quite new shades, which have not been seen in the old class; the seeds are also smaller than in the Tom Thumbs which is evidence that we have an entirely new departure in the Nasturtium family. The dwarfness of the plants and the great variety of color render them especially valuable for border or bedding purposes. When known these little gems will become universal favorites. Per pkt., 25c.

Nasturtium Lilliput.

NEW PERENNIAL HYBRID POPPIES.

TORENIA FOURNIERI.

- Poppy, Perennial hybrid mixed, A new and remarkable strain of hardy perennial poppies. The flowers are very large, and embrace a great variety of delicate and beautiful colors, ranging from flesh color to deep purple. A strain of perennial poppies of such varied colors is a very valuable addition to this already popular class of plants (See cut). Per pkt., 25c.
- Iceland Poppies, (Papaver Nudicaule). Charming perennial Poppies growing about 15 inches high, and blooming the first year from seed. The elegant crushed-satin-like floweres are produced in great abundance from June to October, are deliciously fragrant and unsurpassed for cutting and will last a week if cut as soon as open. In three colors, yellow, pure white and bright orange. Separate, per pkt., 10c or the three for 25c. The three colors mixed, per pkt., 10c.
- Statice Suworowi. A very handsome, free-blooming annual variety, with large spikes of bright rose colored flowers. Native of Turkestan. Per pkt., 15c.
- Sweet Pea, "CUPID" (White Tom Thumb). A dwarf variety of Sweet Pea only growing 5 inches high, which makes it invaluable for bedding or pot culture. The flowers are pure white, of the full size of the ordinary Sweet Peas, deliciously fragrant, and produced in such profusion as to almost cover the foliage. The flower stems bear two or three blossoms each, which open at the same time making it especially useful for cutting purposes. It shows no tendency whatever, either to climb or trail, but does not however have the appearance of being stunted. The foliage is very pretty and of a dark green color and when covered with the snow-white flowers, nothing more beautiful than a bed of these can be imagined. Per pkt., 25c.
- Torenia Fournieri. This flower though not new, is perhaps one of the prettiest of its class in cultivation. It is equally adapted to out door or pot culture, is of branching habit and is about 8 inches high. The flowers are almost too pretty for description, are somewhat maurandya shaped and in color different shades of violet with lilac and yellow. The plant is of easy culture. (See cut). Per pkt. 25c.

Plower and Vegetable Garden.

A Concise Calendar of Operations Throughout the Year, Especially Adapted for Southern California.

JANUARY.

Flower Garden. Continue to plant Lilies. All kinds of evergreen and deciduous shrubs can now be planted. The planting of Hyacinths, Tulips, Narcissus, etc., should be completed this month-Hardy Annuals may be sown out of doors, and, where artificial heat is obtainable, Half Hardy Annuals may also be sown. A hot bed of stable manure is easily prepared by piling it 4 or 5 feet in height, well watered and trampled down, over which place a large box or frame, with glass sash, taking care to well air and sweeten the bed before using.

Vegetable Garden. For main crop sow Broccoli, Carrot, Chicory, Parsnip and Seakale. At the end of the month in warm, sheltered situations, Early Rose Potatoes may be planted. Plant Asparagus, Horseradish and Rhubarb roots. These all require deeply worked ground. Dress beds already planted with about 4 inches of well rotted manure. Cucumbers, Egg Plants, Melons, Peppers, Squashes and Tomatoes may be sown under glass for after planting. A safe plan is to sow about 5 seed of each variety on reversed pieces of sod, about 4 inches square. On planting in the ground, insert the sod with the growing plants and firm the soil in the usual way. By this method the growing plants will suffer no injury. Stick and hill up Peas and other crops requiring it, and attend strictly to cleanliness.

FEBRUARY.

Flower Garden. General planting of Evergreens and Shrubs should be completed as soon as possible. Also finish planting Lilies, Anemones and Ranunculus. Commence planting Gladioli bulbs for succession. Sow Hardy Annuals out of doors, especially Sweet Peas, and Half Hardy Annuals as recommended for last month. This is the best month in which to sow Acacia seeds. Soak for twenty-four hours before sowing, or where practicable, spread dry leaves or bushes over the beds after sowing and watering and set fire to them. This is the best method of sowing all Hard Tree Seeds.

Vegetable Garden. This and the next month will be the busiest of the year in this department, as nearly all crops may be sown in these two months. See Reference Table for varieties to be sown. Continue planting Asparagus and other roots as recommended for last month. Plant main crop of Potatoes. Attend to weeding and hilling up. Thin out Turnips, Carrots and other root

crops requiring it.

MARCH.

Flower Garden. Continue planting Gladioli Bulbs for succession. All Hardy and Half Hardy annuals may be sown in the open ground this month. Alternanthera and other border plants can be planted with safety, as all danger from even slight frost is now over.

Vegetable Garden. Nearly all Vegetable Seeds may be freely sown this month. See Reference Table. Plant out Cucumber, Melon and other plants previously sown under glass. Hill up rows, keep down insects, slugs and vermin, and attend strictly to cleanliness.

APRIL.

Flower Garden. Plant Dahlias, Gladioli, Tuberoses, Tigridias, Tuberous Begonias, and all Summer flowering bulbs. Continue sowing Hardy and Half Hardy Annuals. Watch Rose bushes, and if troubled with green Aphis, use Tobacco Dust freely.

Vegetable Garden. (See Reference Table for varieties to be sown). Plant out Egg, Pepper, Tomato and Sweet Potato Plants, the latter in light, rich soil, well worked, in rows 6 feet apart, and 2 feet in the rows, and keep the soil well worked. Cultivate well and hill up as required.

MAY.

Flower Garden. As Hayacinths, Tulips, Narcissus, etc., die down, the bulbs should be dug up, and stored away in a cool, dry place till fall when they may be replanted. The vacancies thus created should be filled with other flowering plants. Half Hardy and other Annuals may still be sown, and summer flowering bulbs be planted. The garden should now be brilliant with flowers, and all sowing, planting, and general cleaning up should be completed this month for the summer season.

Vegetable Garden. Pinch out points of shoots of Cucumbers, Melons, Squash, etc., as soon as they commence flowering. Sow vegetable Seeds for succession. (See Reference Table) and keep surface of soil well broken.

JUNE.

Flower Garden. Trim edgings of borders and hedges, and carefully attend to watering. Dahlias and Gladioli may still be planted. Sow Eucalypti and Cypress seeds for winter planting.

Vegetable Garden. (See Reference Table for varieties that may be sown for succession). Hill up all growing crops and stick Pole Beans and Tall Peas as required.

JULY.

Flower Garden. Continue to dig up and store bulbs as they ripen. Trim edgings and hedge rows and sow Perennial Flower Seeds in shady situations. Continue sowing Eucalypti and Cypress Seeds.

Vegetable Garden. Cultivate well between the rows. Sow vegetable seeds for succession, as per Reference Table. If manure is used during this hot month, it should be in liquid form.

AUGUST.

Flower Garden. This is the best month in the year in which to sow Hardy Perennials. Most varieties if sown this month will flower the next year. (See remarks on Culture in body of list). Also sow Calceolaria, Cineraria, Pansy and Primula Seeas. (See special remarks on Culture of Tender Annuals). Continue sowing Eucalypti and Cypress Seeds.

Vegetable Garden. Plant second crop of Potatoes. Sow Cabbage, Cauliflower and Spinach for main crops, and others mentioned in Reference Table for succession.

SEPTEMBER.

- Flower Garden. Commence planting Hyacinths, Tulips, Anemones and other Dutch bulbs towards end of month. Prick off Calceolarias, Cinerarias and Primulas sown last month, into small pots, and continue sowing same for succession. Pansies can be grown better transplanted into a well-manured bed than in pots, as they are not so liable to be attacked by the Red Spider. Pansy seed can be sown for succession till the end of November. Also sow all the Hardy Annuals and Perennials.
- Vegetable Garden. Many varieties of Vegetable Seeds may be sown this month. (See Reference Table). Plant out Cabbage and Cauliflower plants sown in July.

OCTOBER.

- Flower Garden. Hyacinths and ohter Dutch Bulbs should be freely planted this month; also Lilies of all kinds. Cineraria and Primula seed may still be sown for late flowering. Continue sowing Hardy Annuals.
- Vegetable Garden. Sow largely Peas, Onion and Spinach for main crop, also other seeds for succession (see Reference Table), especially Winter Radishes.

NOVEMBER.

- Flower Garden. Continue planting Hyacinths and other Dutch Bulbs, and Lilies; also plant roses and evergreens and deciduous shrubs of all kinds. Form new lawns and renovate old ones (for which we recommend our special Lawn fertilizer at the rate of 600 lbs per acre). Carry out Landscape alterations, if required, dig and manure borders and energetically proceed with all heavy work.
- Vegetable Garden. Sow Seeds are recommended in Reference Table for this month and hill up young crops. Keep the ground thoroughly clean, and dig or plow manure in all unoccupied ground for future use. Keep down slugs by free use of Hammond's Slug Shot, salt, lime or any other dressing which is beneficial to the growing crops.

DECEMBER.

Flower Garden. Operations same as last month. Vegetable Garden. Operations same as last month.

REFERENCE TABLE

Showing at a Glance the best Time to sow the different Kinds of

Vegetable Seeds.

This is arranged for the climate of Los Angeles. In colder districts spring sowings should be made one month later than indicated in column.

EXPLANATIONS—The letters S. or P. opposite the variety and under the month in the column, indicate that the Seeds, Roots or Plants may be sown or planted in that month.

Vegetable Seeds---General List.

NOTICE.—In ordering seeds please notice that ounce prices will be charged for quantities less than one-quarter pound, and pound prices for less than ten pound lots. All Vegetable Seeds, except where otherwise priced, can be supplied in packets at 5c each—5oc per dozen. We have affixed the names of the Vegetable Seeds in three languages—the first Spanish; second, German; third, French. The english name is of course given in the heading,

ARTICHOKE.

Alcachofa-Artischoke-Artichaut.

Large Green Globe—The largest and best (see cut). Oz., 30c; lb., \$3.50

Large Green Globe.

ASPARAGUS.

Esparrago-Spargel-Asperge.

Sow in rows a foot apart. Keep carefully hoed and clear from weeds, and the plants will be in condition to set out when one year old. The soil for the permanent beds should be thoroughly manured and trenched to a depth of at least two feet. Plant in rows three feet apart, and one foot between the plants in the rows; spread the roots well out, and let the crown of the plant be covered about six or eight inches when established. Previous to sowing the seeds, soak in tepid water for twenty-four hours.

Conover's Colossal

Columbian Mammoth White, very large, tender and sweet. Per oz., 15c; per 1b., \$1.25. Conover's Colossal, unexcelled in quality and productiveness, (see cut). Per oz., 10c; per 1b., 40c. Palmetto, an excellent variety, very large. Per oz., 15c; per 1b., \$1.00

BEANS-ENGLISH.

Haba-Puff bohne-Feve de Marais.

All beans ordered by mall will be charged 10 cents per pound additional for postage.

Drop early in spring, three inches apart, in drills two or three feet apart. When in full bloom nip an inch or two off of each stem. A strong, heavy soil, with considerable portion of clay, suits them best.

Early Long Pod, good and productive...10c per lb. Broad Windsor, largest and best.....10c per lb.

BEANS-DWARF OR BUSH.

Frijoles-Bohne-Haricots Nains.

Select light, rich soil and plant 2 inches deep, in drills two feet apart. The plants should be about three inches apart, and the earth around them kept loose and clean. The vines should not be disturbed when they are wet, as it would be liable to cause rust. It is better to defer planting until the weather has become warm and settled, as these varieties are not hardy, and will not endure the least frost or cold.

Dwarf Golden Wax.

Burpee's Bush Lima, a splendid Dwarf Lima of large size.

Canadian Wonder. (See cut). This is without exception the most productive dwarf bean yet introduced. The pods, which are produced in the greatest abundance, are very fleshy and exceedingly tender when cooked. Excellent as an exhibition variety.

BEANS-POLE OR RUNNING.

Frijol de Bejuco-Stangenbohne-Haricots a Rames,

German Wax Pole.

Snake or Asparagus Bean.

Lazy Wife's Pole Bean.

These varieties require a rich soil Plant in well manured hills, three feet apart each way, covering to a depth of two inches. In each hill set a pole eight or ten feet long, around which plant five or six beans, and afterwards thin out, leaving four strong, healthy plants to each hill. They may also be grown without poles, allowing the vines to run, planting in hills four feet apart.

	Per 100 lbs.	Per 1b.
Asparagus, or Snake, produces pods 12 to 18 inches long, thin and very tender, (see	÷	
cut). Per oz., Ioc		25c

BROCCOLI:

Broculi-Spargelkohl-Broccoli.

Closely allied to the Cauliflower, but hardier. Sow the seeds in beds and transplant to rich, mellow ground, two feet apart. A light free loam, well enriched with rotted stable manure is best. Cultivate the same as Cauliflower. One ounce of seed will produce 2,000 plants.

White Cape Broccoli Per nkt. Per oz. Per lb.

Early Purple Cape, very hardy; heads solid and compact; color greenish purple White Cape, later than Early Purple Cape; heads medium size, firm, and a rich creamy color, (see cut)

10c 30c 3.00

BRUSSELS SPROUTS.

Berza de Bruselas-Rosenkohl-Chou de Bruxelles.

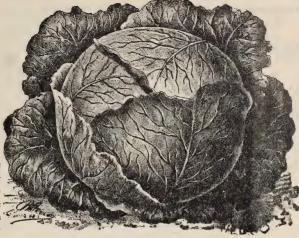

This plant produces from the sides of the stalks numerous little Sprouts resembling Cabbages, one or two inches in diameter. They are very tender and sweet. Sow in seed-beds, transplant and cultivate like cabbage. Use the hoe often and keep clean. One ounce will produce 2,000 plants.

Dwarf Improved, very fine; heads of good quality (see cut), per oz., 15c; per lb. \$1.50.

CABBAGE.

Repollo-Kopfkohl-Chou Pomme

Commence to sow the seeds of the early varieties in August, and each month following until spring for succession. Transplant as soon as large enough, to fresh, rich soil, in rows two feet apart and eighteen inches in the rows. For late use sow the Drumhead sorts in spring, and transplant to well manured ground three feet each way. In planting Cabbage or Cauliflower, care should be observed that the stem is set under the ground as far as the first leaf. The ground should be well worked, to produce good heads, and hoed as many as three times during the season, drawing the earth slightly about the stems. One ounce will produce 2,000 plants.

Early French Horn.

CARROT.

1.50

Zanahoria-Mohre-Carotte.

Of root crops the Carrot ranks among the first in value of importance. The soil best adapted to it, and root crops in general, is a light loam, which should be richly manured, deeply ploughed, and pulverized. Sow in rows fifteen inches apart, and thin the plants five or six incher in the rows. One ounce of seed will sow about 150 feet of row. Three pounds to the acre.

VARIETIES FOR TABLE USE.

(For field Carrots for feeding Stock, see Agricultural Seeds.)

Ox-Heart or Guerande.

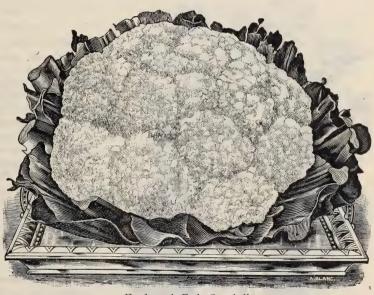

Half Long Scarlet Point Rooted.

Altringham, large and finely flavored; color bright orange red Chantenay, a rich, dark orange color, and in shape very symmetrical. The stock has been so well bred that the carrots have attained to such uniformity in shape	Per oz- 10c	Per 1b. \$0.75

CELERY.

Apio-Sellerie-Celeri.

Sow seed in frame or open ground, Transplant four inches apart, when three inches high, in rich soil finely pulverized; water and protect until well rooted, then transplant into rows five or six feet apart, either on surface or in well manured trenches a foot in depht, half filled with well-rotted manure. Set the plants from eight to twelve inches apart. To blanch, draw earth around the plants from time to time, taking care not to cover the tops of the centershoots. One ounce of seed will produce 5,000 plants.

The Celeriac or Turnip-rooted may be planted either on level ground or in shallow drills, and cultivated in a manner similar to Celery. The roots are used as a salad.

TAXAY NATAWAY A SALAY DE VARABE WAR ANAMAY NA SALAY A	Per oz.	Per 1b.
Boston Market, one of the best of		
the white varieties; early and		
hardy, (see cut)	20c	\$1.75
Carter's Dwarf Crimson, fine dark		
crimson color; stalks sweet and		
crisp; a first class variety	20c	2.00
Crawford's Half Dwarf. When

	Per oz.	Per lb.
Golden Dwarf, or Golden Heart. This differs from the Half Dwarf white kinds only	101 021	101 10.
in color; when blanched, the heart, which is large and full, is of a waxy golden		
yellow color	20c	\$1.75
Golden Self-Blanching, similar to the White Plume in its self-blanching character-	200	φ1,10
istics, but of a deep, golden yellow color; (see cut)	30c	3.00
Large White Solid, the most popular of the large varieties, (see cut)	15c	1.50
White Plume. The stalks and portions of the inner leaves and heart are naturally		
white, so that by closing the stalks, either by tying them together or by pressing		
the soil up against the plant with the hand, and again drawing up the soil with a		
hoe or plow, so as to keep the soil that has been squeezed against the Celery in		
place, the work of blanching is completed. Its eating qualities are equal to the		
very best of the older sorts, being crisp, solid, and of a nutty flavor, while its white		
feather-like foliage places it ahead of all others as a table ornament	20c	2.00

CHERVIL.

Perifollo-Kerbel-Cerfueil.

Cultivate and use like Parsley. Sow at any time in the spring, in shallow drills, one foot apart. Curled. The leaves of this are used for salads, and for garnishing, same as Parsley,

per oz., 10c; per 1b., \$1.00

CHICORY.

Cichorie-Chicoree.

Sow the Large-Rooted, or Coffee variety, in the spring; in the fall the roots require to be taken up and cut in small pieces and put where they will dry, requiring the same treatment used in drying apples. When required for use it should be roasted and ground like coffee.

Common, or Wild, used as Barbe de Capucin, a salad much used in France. Sown in spring, the roots are transplanted in autum into sand in a cellar. The shoots which will come up soon, form the Barbe de Capucin........

Large Rooted, or Coffee, (see cut), much used in Europe as a substitute for coffee

Per oz. Per lb. \$1.00 10c

.90 10c

10c

COLLARDS OR COLEWORT.

Cabu-Blatter kohl-Chou-Cabu,

A species of Cabbage which is eaten when young, and used quite extensively as greens. Sow in spring in drills one foot apart. Thin to eight inches and treat as Cabbage.

CORN-SWEET.

Maiz-Welschkorn-Mais.

Plant the smaller varieties in drills three feet apart and ten inches apart in the rows; or in hills three feet apart each way and three or four grains in a hill. The taller varieties on rich soil should be given a space of four and one-half feet between the drills and one foot between the stalks, use some rich manure in the drills, hoe often, keeping the earth well stirred, drawing it in slightly about the roots.

The following are all eastern grown from extra selected stocks. (If ordered by mail 10 cents per pound will be charged additional for postage.)

Per 100 lbs. Per lb. Black Mexican, the sweetest, richest, and tenderest of all sweet corn; it is remarkably productive. Second early; it is very white when suitable for cooking, but the ker-\$6.00 nels are bluish black when ripe

CORN SALAD.

Macha o' Valerianilla-Lammer-Salat-Mache.

Commonly called Lamb's Lettuce. For a summer supply, sow early, in shallow drills one foot apart; and for early spring use, sow about the first of September.

CRESS OR PEPPERCRASS

Berro o Mastuerzo-Kresse-Cresson.

Select good, rich soil, sow the seeds thickly at frequent intervals for a succession, in drills one foot apart, covering lightly. A cool, moist soil and shady location is the best for summer sowings. One ounce of seed will sow to feet of drill.

	Per oz.	Per lb.
American, an excellent substitute for Water Cress	10c	\$0.75
Extra Curled, very fine: excellent for salads	10c	.50

CRESS (WATER).

Brunnenkresse-Cresson de fontaine.

The plant is cultivated by sowing the seeds by the side of running water or near springs. Water Cress is an aquatic plant with small, oval leaves, and prostrate habit. The leaves are universally used and eaten as an early and wholesome salad in spring. Pkt., 10c; oz.. 40c; lb., \$4.00

CUCUMBER.

Pepino-Gurke-Concombre.

Nichol's Medium Green.

Plant the seed as soon as the weather becomes settled and warm, in hills four feet apart, using a shovelful of warm, wellrotted manure to each hill. Cover the manure two inches deep with fine earth, and plant eight or ten seeds in each hill. The seeds should be covered about one-half inch deep with well pulverized soil and firmly pressed down with the back of

the hoe. Hoe often, and when out of danger from insects thin to four plants in each hill. Cucumber-

as well as Melon and Squash seeds, are considered best when two or three years old; they run less to vines, and bear earlier and more abundantly. One ounce will plant about 100 hills. Per oz. Per lb. Boston Pickling, medium size; a very productive kind, of superior quality (see cut)... 10c \$0.70 Climbing Delicatessen. (See cut.) A distinct variety, climbing up stakes and trellises, 8 feet in height, producing Cucumbers 8 to 10 inches in length, of a very fine flavor. White Spine, excellent for the table or pickling; a great bearer, (see cut)	10c	.60
West India Gherkin, oval shaped, prickly, for pickling only. Pkt. 10c	20c	1.50

New Siberian.

DANDELION.

Amargon-Kuhblume-Pissenlit.

This vegetable has become very popular as an early healthful green, and the roots also are used when dried as a substitute for coffee. Its use in either of these forms is particularly recommended to those who are inclined to any disease of the liver. Sow in drills one foot apart, covering the seed half an inch deep. A rich soil is preferable, but this plant will thrive anywhere.

Dandelion, common variety, per pkt. 10c; per oz. 30c. Improved, large leaved, per pkt. 10c; per oz. 75c.

New York Improved.

EGG PLANT.

Berengena-Eierpflanze-Aubergine

A tender annual, producing large egg-shaped fruit and considered a delicacy. Sow seed in a frame if possible. When three inches high transplant into small pots, so that the plants may become stocky, and be readily planted out from the pots. When the season becomes sufficiently warm transplant into thoroughly worked and well enriched soil about three feet apart each way. One ounce of seed will produce about two thousand plants.

	Per pkt.	Per oz.
Early Long Purple, of easy culture; thrives well in		
almost any section	10c	35c
New York Improved Purple, an improved variety		
of the Round Purple, of deeper color, larger size,		
and finer quality; a superior market variety,		
(see cut)	10c	50c

ENDIVE.

Escarola o Endibia—Endivien—Chicoree.

This vegetable is highly esteemed as a salad. Sow small quantities at different times to insure a plentiful supply, as these crops soon run to seed. One ounce of seed will produce about 3,000 plants.

London Green Curled.

White Summer Cabbage, heads well formed and of good size; excellent for summer.	10c	.80

MARTYNIA.

Gemsenhorn.

A hardy annual plant; with strong branching stem; grows about three feet high. The young pods which are used for pickling, are produced in great abundance, and should be gathered when about half grown, or while tender and succulent. Sow in seed-bed and transplant to any rich garden soil, two and a half feet apart each way.

MELON-(MUSK.)

Melon Almizelena—Cantalupen—Muscade

Select light, warm soil. Plant in hills six feet apart each way, six or eight seeds to a hill; thin out to three or four plants when in a forward state. The hills should be prepared by digging out the soil a foot and a half deep, thoroughly mixing in each hill a couple of shovelfuls of well decomposed stable manure, filling up a little above the level. The planting should be deferred until warm, settled weather. One ounce of seed will plant about 100 hills.

MELON-(WATER).

Sandia-Wassermelone-Melon d'Eau.

Evolution from the Water Melon

As soon as the weather becomes settled and warm, select soil and manure as recommended for Musk Melons. Plant in hills six to eight feet apart, six to ten seeds, one inch deep, and thin to three best plants. Hoe often, and gradually hill up until the vines touch, and after the flowers appear, pinch off the extreme end of the most luxuriant shoots.

MUSHROOM SPAWN: -(See cut.)

Blanc de Champignon-Seta-Champignonbrut.

CULTURE—Mushrooms may be grown in cellars, under benches of greenhouses, or in sheds, wherever the temperature of 60 degrees can be kept. Secure fresh horse dung, free from straw and litter, and mix in an equal bulk of loam from an old pasture with it. Keep this under cover, taking care to turn it every day to prevent heating, until the pile is large enough to make a bed of the required size. Three or four feet wide, eight inches deep and any length desired, are the proper proportions for

Mushroom Beds.

a bed; these may be varied. Prepare the mixture of loam and manure, making the bed in layers, and pounding down each with the back of the spade. Leave this to heat through for a few days, and as soon as the heat subsides to 90 degrees, make holes in the bed about a foot apart each way, into which

put a piece of the spawn two or three inches in diameter; fill up the holes with the compost, and at the expiration of a week or ten days the spawn will have thoroughly diffused itself through the bed. Spread a layer of fresh soil over the heap to a depth of two inches, and cover with three or four inches of hay, straw or litter. Examine the bed often to see that it does not get dry. When water is given it should be at a temperature of about 100 degrees. Mushrooms will appear in from four to six weeks, according to the season. (See cut of Mushroom beds),

When ordering by mail, add ten cents per pound to cover postage.

MUSTARD.

Mostaza-Senf-Moutarde.

Used as a salad early in Spring, sometimes with Lettuce and Cress. Plant like Cress.Per lb., 10c Spinach, and have a very agreeable flavor. One of the best green foods for poultry ofPer oz., 10c Per lb., 75c

NASTURTIUM.

Maraneula-Indianische Kresse-Capucine Grande.

The tall or climbing varieties are used to cover arbors or fences, or to climb or twine upon the sides of a house; they may be planted in rows, the dwarf kinds in hills or rows four feet apart. The seeds, picked when young and green, are used for pickles, and the leaves for salads. One ounce of seed will sow twenty five feet of row.

Dwarf, very ornamental, per oz., 15c., per lb., \$1.00 Tall, excellent climber, per oz., 15c., per lb. \$1.00

OKRA.

Quimbombo-Essbarer-Gombo.

This vegetable produces long nutritious pods, which, when young, are used in soups and stews, to which they impart a rich flavor. It is easy of culture, grows freely and bears abundantly on any ordinary garden soil. Sow after the ground has become warm, in drills two inches deep, and two and a half feet apart; thin out the plants to nine inches in the row; hoe often and draw the earth up to the stems. One ounce of seed will sow flfty feet of row.

Per oz Per lb. Early Dwarf, early and productive; pods white, round, smooth, (see cut). 10c 10c tender, well flavored and very prolific. The best of the Okras....... 15c \$1.00

Early Dwarf.

Mammoth Silver King

ONION.

.75

.75

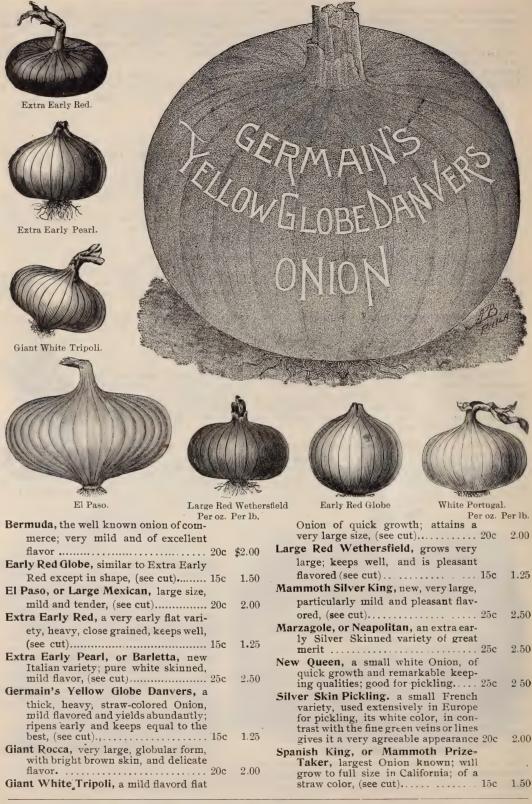

Cebolla-Zwiebel-Ognon.

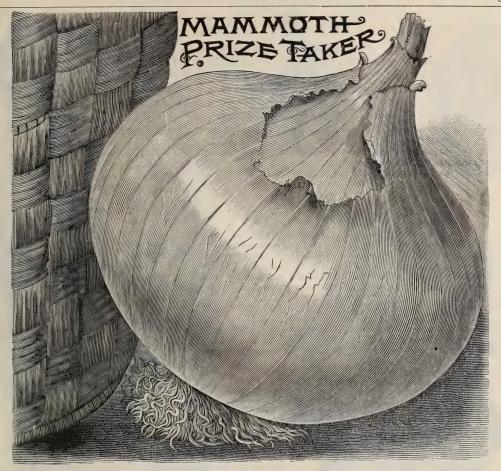

Select fine, light soil, and manure heavily with the oldest and strongest compost that can be procured. Plow a depth of five inches, and work well with the cultivator. Plow again at right angles with the first furrows, and again thoroughly cultivate. The ground will then be in fine working order, and should be leveled smoothly with a rake. Drill fourteen inches apart, sowing the seed thinly, cover a quarter of an inch deep with fine soil, and press down with the back of a spade or light roller.

We recommend the Planet Jr. Seed Drill for sowing Onions. It will do it better than possibly can be done by hand. See "Implements," etc.

When the young plants are strong enough, thin gradually, so that they stand finally four Keep clean of weeds, and inches apart.

take care that the earth does not accumulate about the bulbs, but allow them to bottom above the ground. When the greenness has left the top, of the onions, pull them, and let them dry a few days before storing. One ounce of seed will sow about 100 feet of drill. Four pounds to the acre.

ONION SETS.

Bottom Onions, or Onion Sets, are produced by sowing the seed thickly late in the spring, in beds or drills, and about the end of August, or whenever the tops die down, the little bulbs or sets are gathered and kept spread thinly in a dry airy loft, and re-set in the spring, to make large Onions.

If ordered by mail 10 cents per pound will be charged additional for postage. Price per 100 lbs. on application.

Top or Button Onions are the little round bulbs, growing on top of the stalk, and are planted early in the spring, in shallow, twelve-inch drills, about four inches apart, slightly covered; these will produce large Onions, maturing much earlier than from the seed. If the large Onions are planted again in the spring, they will produce a number of small bulbs growing on the top of the stalk, which serve as a substitute for seed in propagation. Per lb. 25c, postage added as above. Price per 100 lbs. on application.

PARSLEY.

Perijil-Petersilie-Persil.

Parsley succeeds best in rich, moist soil. Sow thickly in drills one foot apart and half an inch deep. The seed germinates slowly, and frequently remains in the ground two or three weeks without showing any signs of vegetation. When the plants are two inches high, thin them out to four inches apart. One ounce of seed will sow about fifty feet of row.

Extra Curled,

Champion Moss=Curled, a very select stock; leaves beautifully curled; the finest variety for garnishing	Per oz 10c	Per 1b. \$0.75
Extra Curled, a fine dwarf variety; leaves beautifully curled, (see cut)	10c	.75
Fern Leaved, invaluable as a garnishing plant	10c	.75
Hamburg or Turnip=Rooted, the roots are excellent for flavoring soups	10c	1.00

PARSNIP.

Chirivia—Pastinake—Panais.

A deep, richly manured soil, susceptible to moisture, should be selected for Parsnips. This vegetable requires a long season to mature, and the seed should therefore be sown early. Drills half an inch deep and fifteen inches apart should be marked out; drop the seed in thickly, for where the seeds are few they are apt to perish in the ground, not having sufficient strength to open the pores of the earth. One ounce of seed will sow about fifty feet of row.

Per oz. Per lb.

Hollow Crowned, best Parsnip grown either for table or stock,

Round, or Turnip=Rooted, excellent for shallow soil (see cut)

.75 Hollow Crowned. Round

PEAS.

\$0.50

.50

10c

J.0c

10c

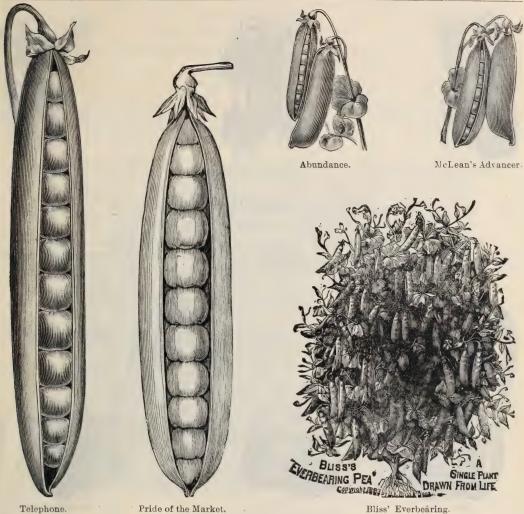

Chicharos o Guisantes—Erbsen—Pois.

The Pea is one of our most important crops, and to be successfully grown must be liberally treated. A deep, rich soil, well pulverized, and incorporated with a fair allowance of well decayed manure, should be chosen for the principal crops. For early Peas the ground does not require to be so rich. Sowing of the first early variety should be made in October, and the other varieties for successive crops, plant every two weeks until the first of April.

Peas are sown in single or double rows, from two to six feet apart, according to the variety or the height to which they attain. Have the rows of the dwarf varieties two feet apart, and those of the medium sorts from three to four feet, and the tall varieties from five to six feet apart.

When raised for market, Peas are not staked but sown in single rows; when intended for private use, they should be sown in double rows about nine inches apart, and covered two inches deep. Staking up should be commenced when they are three inches high. The dwarf varieties may be grown without sticks. Two pounds will sow 100 feet of row. (If ordered by mail, will be charged 10 cents per pound. additional, for postage).

Bliss' Everbearing.

Sugar, medium size, excellent for cooking.	10c	.60
See also Agricultural seeds.		

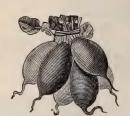

RADISH.

Rabanos-Radieschen-Radis.

The Radish will succeed well in any good garden soil, not over moist or too heavy. A sandy loam enriched by well-rotted manure is best. For early and late crops a warm, sheltered situation should be chosen; whilst for those sown in the heat of summer a rather shady spot must be selected. For a succession, sow every two weeks. The ground where the sowing is to be made should be deeply dug and raked fine. The seed is generally sown thinly broadcast, in beds from four to five feet wide, with one toot alleys between, the soil from the latter being used to cover the seeds, but only slightly. The surface is then raked smooth, and in light soils pressed with the back of the spade. The winter varieties should be sown in drills one foot apart, and thinned to six inches apart in the rows, and if roots of large size are required, as much as nine inches may be allowed. One ounce of seed will sow about fifty feet of drill or a bed of fifty square feet.

RHUBARB, OR PIE PLANT.

Ruibarbo-Rhabarber-Rhubarbe.

Sow the seed early in the spring, in drills 18 inches apart, and cover one inch deep; thin the plants to six inches apart, and keep them free from weeds. The plants being one year old, should be removed to the prepared beds, and placed three feet apart each way. Do not cut until the second year, and apply a dressing of manure every fall. The most expeditious mode of obtaining

Victoria.

a supply is to procure roots which will produce the first season. The roots

ROSELLA.

by market gardeners for main crop late in the season, (see cut)

(Hibiscus Rosella Subdorifa.)

A tropical plant, native of India, which will succeed in this climate. It has been grown in Southern California with very satisfactory results. The seed should be sown in February, on bottom heat, and treated like the egg plant. From the fleshy calyx of the flower a beautiful preserve is made in Australia, which is like, but an improvement upon, that made from black currants. Makes also a fine flavored sauce when stewed like cranberries. The flowers are very handsome. Per pkt., 10c; per oz., \$1.50.

SALSAFY, OR VEGETABLE OYSTER.

Ostion Vegetal-Haferwurzel-Salsifis.

Select light, rich soil. Sow the seed thickly in drills, twelve inches apart, and cover one inch deep. When the plants are two or three inches high, thin out to six inches from each other in the rows; hoe often, and keep the earth loose and clean around them. The roots may be taken up and stored in moist sand to exclude the air, or left in the ground; they are boiled or stewed like parsnips, the flavor resembling the oyster. One ounce of seed will sow fifty feet of row.

SQUASH.

Calabacera-Kurbiss--Courge.

Light, warm soil is best adapted to the growth of the Squash. The seed should not be sown until all danger from frost is past. Plant in hills—prepared in the same manner as for Cucumbers and Melons—the Bush kinds about four feet apart, and the running varieties from six to nine, according to their nature, as some will run more than others. Plant about half a dozen seeds in each hill. The earth about the plants should be kept loose and clean from weeds until runners are well started. Cutting off the leading shoots of the running varieties is recommended as having a tendency to promote growth and early maturity of the fruit. One ounce of seed will plant from fifteen to forty hills.

Perfect Gem.

Early White Bush Scalloped

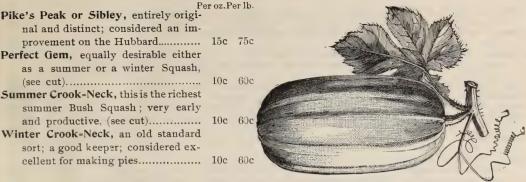

Hubbard.

Summer Crook-Neck

	Per oz.	Per lb.
Boston Marrow, a standard fall Squash of rich orange color; very productive and		
keeps well	10c	60c

Hubbard, the best of all winter varieties; grows to a large size, (see cut)	10c	50c
Long White Vegetable Marrow, an English Squash of very superior flavor (see cut)	10c	60c
Mammoth Chili, grows to immense size, often weighing over 200 lbs.; very productive;	15c	80c
Marblehead, an excellent winter Squash; good keeper, dry and sweet; the shell is		
much harder than the Hubbard, and light blue in color	10c	60c

Long White Vegetable Marrow.

товжеео.

Tabaco-Tabak-Tabac.

The seed may be started in hot beds, or sown in the open ground as soon as the ground is warm, in rich, dry soil; rake off the bed and sow broadcast, pressing down firmly and evenly, covering the seed very slightly; keep free from weeds, and water frequently if the weather is dry; set out when all chance of frost is past, three feet apart, in land that has been heavily manured with wood ashes if obtainable—brush burned on the ground will answer the purpose. One ounce will sow twenty-five feet square, and produce plants for one acre.

Per oz. Per lb.

Harby, a Turkish variety which stands heat and drouth beyond all others, and may		
be topped for 25 leaves or more	20c	2.00

TOM♠TO.

Tomate—Liebesapfel—Tomate.

Sow the seed in frame or sheltered bed. When the plants are two or three inches high, thin them out and set them in pots or in another bed, to give them room and make them "stocky." When five or six inches high, if the weather be warm and settled, transplant them to open ground, selecting a rainy day, if possible; in the absence of rain, water and protect till well rooted. Set the plants four feet apart each way and support by driving two or three stakes around each plant, and encircle with as many barrel hoops; this will serve to keep the fruit off the ground. One ounce of seed will produce 3,000 plants.

The tomato requires a rather light soil to ripen early; but if handsome fruit and a plentiful crop be desired, very rich soil should be selected.

TURNIP.

Nabo-Ruebe-Navet.

For earliest crops sow the Early White Flat Dutch or Munich during the winter; and for summer crops sow any of the other varieties at intervals of a fortnight until June, in drills twelve inches apart; cover the seed lightly unless the season be very dry; thin out the plants to six or eight inches apart. For fall or winter use sow the Golden Ball, or Purple and White Top Strap Leaf varieties. Success in raising Turnips depends greatly on the selection of soil, and its subsequent preparation as well as the quality of seed.

Seeds of Pot, Sweet and Medicinal Herbs.

A well assorted selection of the various kinds of Herbs should have a place in every garden. Their value in seasoning and flavoring is well known and appreciated. Some kinds are aromatic, while others are used for medicinal purposes. Care should be taken to harvest on a dry day, just before they fully blossom.

Agricultural.

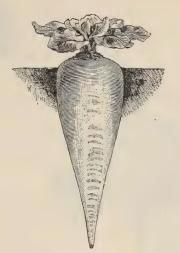

BEET-SUGAR VARIETIES.

Culture. Sow in the beginning of March; first plowing and subsoiling to the depth of at least fifteen inches. The Seed should be soaked for twelve hours before sowing, and be covered at least one inch when sown. The rows should be fifteen inches apart, and the plants should be thinned to eight inches apart in the rows. Any vacancies can be filled up by transplanting. Sow none but the best selected Seed, as inferior Seed will produce inferior roots, both as to size and saccharine matter. The latest authorities recommend the sowing of from 15 to 17 lbs. per acre, thus doing away with the work of transplanting to fill up vacancies. Ten lbs. supplied at 100 lb. rates.

(If ordered by mail, ten cents per lb, will be charged additional for postage.)

	Per lb.	Per 100 ll s.
KleinWanzlebener. A well known variety, richest in sucrose, and the heaviest cropper, (see cut)	20c	\$12.50

feeding. Very sweet and tender.	20c	11.00

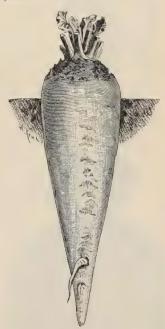

White Munich.

Klein Wanzlebener Sugar Beet.

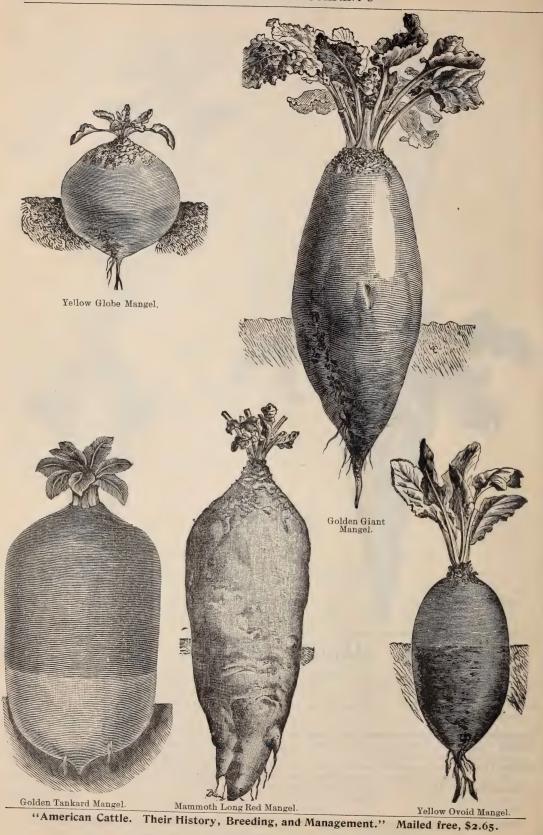

Lane's Improved Imperial.

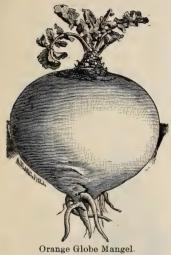

MANGEL WURZEL.

Cultivated extensively for stock. Select a deep rich loam and manure well. Sow any time from the middle of November until April, in drills two and a half to three feet apart, and thin to nine inches in the row. The long varieties prefer a light sandy loam. The round varieties are the best for planting on stiff soil. Sow six pounds to the acre. (If ordered by mail, 10c per 1b. will be charged additional for postage.)

Clover and Grass Seeds.

For Lawns, Meadows, and Permanent Pastures,

Express or freight Charges always to be paid by the purchaser. If wanted to be sent by mail, postage must be added at the rate of ten cents per pound. As market is apt to fluctuate, quotations on 100 lb. lots of the following varieties of seeds given on application, and samples mailed free. 10 lbs charged at 100 lb. rate.

CLOVER SEEDS.

Crimson. or Scarlet clover.

Alsike, or Swedish. (Trifolium Hybridum). A hybrid between the Red and White Clovers, but of much stronger growth than the latter, and will yield a heavy crop on any soil. Stands drouth well, yields a large return in Hay, and is unsurpassed for bees. Sow early in spring. Per lb. 20c

yields a large return in Hay, and is unsurpassed for bees. Sow early in spring. Per lb., 20c.

Alfalfa, or Lucerne. (Medicago Sativa). This valuable species is too well known in California to need description. It sends its roots to a great depth, and produces a prodigious amount of green food for cattle. In fact it has proven itself the best of all the Clovers grown in California. It will also answer for soiling in suitable situations. Should be cut as soon as it begins to flower or even earlier, as it is apt, if cut later, to become coarse and hard with woody fibre, and is less relished by cattle. Per lb., 15c; 100 lbs., market price.

Bokhara, or Sweet Clover. (Melilotus Alba). Very valuable for soiling. It grows from four to six feet high, and may be cut three times or more if sown in good soil. Should be cut before flowering. Very

good for bees. Per lb., 40c.

Burr Clover. (Medicago Maculata). California Burr Clover, Spotted Medick. An excellent fodder plant for the south. The stems are creeping and soon spread over a large area. Flourishes in dry soils, and is not affected by the drouth of Southern winters. About 12 lbs. of the burrs should be sown to the acre, and on good soil, lightly covered, will soon spread over the entire surface. Per lb., 15c; 100 lbs., market price.

Esparsette, or Sainfoin. (Hedysarum Onobrachyium.)
Cattle are very fond of this plant, both green and made into hay. It is a perennial, from two to three feet in height, with a broad, flesh colored flower, and yields two crops a year. We should advise the sowing of about 50 lbs, of Barley with 40 lbs, of Esparsette to the acre, as our experience is that without the barley for shade the crop is not always reliable in Southern California. Per lb., 20c 100 lbs., \$12.50.

Italian Crimson, or Scarlet Clover. (Trifolium incarnatum). (See cut.) This valuable forage plant; long known and appreciated in Europe, is now rapidly coming to the front in this country. As a "stolen crop" it is unsurpassed, for it can be sown in the Fall and cut in the Spring in time to plant another crop on the same ground. It is hardy, being capable of withstanding from 15 to 20 degrees of frost without injury. This plant promises to become an important factor in the agriculture of the future. The yield of green fodder ranges from 10 to 13 tons to the acre. In addition to its valuable qualities as a forage plant it is no less desirable as a green manure, absorbing, as it does, large quantities of nitrogen from the atmosphere, which, in its capacity as a fertilizer, it transfers to the soil. Sow 12 lbs. to the acre. Per lb. 15c; 100 lbs., \$8.50.

Japan Clover, (Lespedeza Striata.) This variety, originally introduced from Japan, has now naturalized itself in nearly all the Southern States. It will grow on the plains, and up to an altitude of 4,000 feet, stands drought well, and living after most other herbage is dead. For milch cows it is very

beneficial, largely increasing the flow of milk. Sow in spring, 12 lbs. per acre. Per lb., 25c. Kidney Vetch, or Sand Clover, (Anthyllis Vulneraria.) A deep-rooted plant, valuable for dry sands and inferior soils, upon which Esparsette or Clover will not thrive. Eaten with avidity by sheep cattle and horses. Produces abundantly of hay and seed. Sow 20 lbs. of seed per acre. Per lb.,

50c; 100 lbs., \$30.00

Mammoth Red, or Cow Grass. (Trifolium Pratense Perenne.) Quite distinct from the common Red Clover, having a shrubby stem, and a longer and more penetrating root, thus enabling it to withstand drouth well. Grows five to six feet high, and is much used as a green manure. Sow 20 lbs.

per acre alone, or 5 lbs. when mixed with other grasses. Per lb., 20c. Small Red. (*Trifolium Pratense*.) A most valuable variety for fodder, also excellent for plowing under for manure. Will succeed on any soil of moderate fertility; and of average moisture. Another great advantage in favor of the cultivation of this variety consists in its rapid growth. But a few months elapse from the sowing of the seed before it yields, ordinarily, an abundant and nutritious crop, relished by cattle of all kinds. Per lb., 20c.

Trefoil, or Hop Vine Clover. (Medicago Lupulina.) Very distinct, bearing yellow flowers, and of erect and branching growth. Yields a large nay crop. Useful in mixtures with other Clovers and Grasses, and branching growth.

when 2 lbs. is sufficient for an acre. When sown alone for hay, 20 lbs. should be used. Per lb., 25c. White Dutch, (Trifolium Repens.) An excellent pasturage plant. Its flowers are also a favorite resort for the honey bee. It succeeds on all rich, clayey lands, if not too wet. It is the best variety of Clover to mix with grasses for lawns. Sow early in spring. Per lb., 30c.

GRASS SEEDS.

The following are the most valuable Grasses for agricultural and other purposes.

The prices of some varieties may change as the season advances.

Bermuda, or Couch Grass. (Cvnodon Dactylon.) This Grass, the "Doob" Grass of India, is one of the most valuable for hot countries, suitable either for Lawn or Pasture, and very valuable for fixing loose soils. For eight months in the year it is beautifully green; in cold weather it turns brown. The seed will not germinate in cold weather. April, May and September are the best months in which to sow. Sow 10 lbs. to the acre. Per lb. \$1.00.

mus Inermis. (Awnless or Hungarian Brome Grass.) A valuable forage plant for light; dry soils;

Bromus Inermis.

suitable for cutting and feeding in a green state; also for pasture or curing into hay. Very productive. Sow 35 lbs. per acre. 30c per lb.; \$25.00 per 100 lbs.

Crested Dog's=Tail Grass. (Cynosurus Cristatus.) A valuable Grass for sheep pastures, on dry, hard soil and hills. It also belongs to the family of lawn grasses. 25 lbs. to the acre. Per lb., 40c.

Italian Rye Grass. (Lolium Italicum.) A valuable annual variety, thriving well in any soil, and yielding early and abundant crops. Especially valuable for pasture in Southern California. Although strictly speaking it is an annual, if cut before going to seed may be considered perennial in this climate. Claimed to stand any amount of forcing by irrigation. Sow 30 lbs. to the acre. Per 1b., 15c; 100 lbs., \$12.00.

"Grasses and Forage Plants." (Flint.) Mailed free, \$2.20.

Kentucky Blue, or Smooth Meadow Grass. (Poa Pratensis.) Very valuable for California, as it thrives in moderately dry soils and withstands the hot summers. Does not become thoroughly established until the third year. Also a valuable lawn grass. For lawns sow 150 lbs per acre; for pastures We offer none but fancy cleaned seed. Per 1b., 25c; 5 lbs. for \$1.00; per 50 lbs. is sufficient. 100 lbs. at market price

Meadow Fescue, or English Blue Grass, (Festuca Pratensis,) One of the earliest, most nutritious and productive of the Fescues. Attains its full productiveness the second year. Sow 40 lbs. to the

acre. Per lb., 25c; 100 lbs., \$15.00.

Mesquite, Meadow Soft Grass, or Yorkshire Fog. (Holcus Lanatus.) This grass will succeed on low swampy ground, or on dry soils, and in general in situations where other grasses would perish. Per. 1b., 15c; 100 lbs., \$10.00.

Natal Red Grass. This variety thrives well in the hot, dry climates of Australia and South Africa. It is particularly adapted for dry, sandy soils; stands repeated cropping, and is much relished by stock

is particularly adapted for dry, sandy soils; stands repeated cropping, and is much relished by stock of all kinds. In packets only. Per pkt., 10c

Orchard Grass, or Cocksfoot. (Dactylis Glomerata.) A very valuable grass, all kinds of stock being greedily fond of it. Will bear cropping very well. When established will withstand both floods and drouth. Sow 40 lbs. to the acre. Per lb. 20c; per 100 lbs., \$15.00.

Perennial Rye Grass. (Lolium Perenne.) (See cut). The merits of this grass are becoming more recognized every year. It adapts itself to almost any soil, germinates freely, and seeds abundantly. Of upright habit, bearing abundance of nutritious foliage, it is much relished by stock, and its roots being fibrous and penetrating, give it a permanancy not possessed by many other species. Sow 60 lbs. per acre. Per lb., 15c; 100 lbs., \$9.00.

tures or lawns, standing heat well and growing in almost any soil. Ripens later than almost any other Grass. Sow 30 lbs. to the acre. Fancy cleaned seed, per lb., 25c; 100 lbs., \$20.00. Fair seed, per lb., 15c; 100 lbs., \$12.00.

Sweet Vernal Grass (Anthoxanthum Odoratum.) Useful mixed with other grasses, on account of its

excellent quality and early growth. Ie emits an agreeable odor when cut for hay, and all kinds of stock eat it greedily. Sow Io lbs, per acre in mixture with other sorts. Per lb., 60c.

Timothy, or Herd's Grass. (Phleum Pratense.) This grass thrives best on moist soil, or rich, wheatbearing alluvial lands. Should be cut when seeds are ripe, as the nutritive value of the hay will be twice as great as when cut in the flower. On account of its first yielding an abundant hay crop and then a nutritious aftermath, it is particularly valuable as pasture grass. Sow 20 lbs. to the acre Per lb., 10c; 100 lbs., \$7.00.

Yellow Oat Grass. (Auena Flavescens.) Desirable in mixture with other varieties, for dry soils.

Per 1b. 80c.

Our Own Special Mixture of Best Grasses and Clovers, in the most suitable proportions, especially suited for Southern California dry soils. Sow 50 lbs. to the acre. Per lb., 30c; 100 lbs., \$20.00.

For Lawn Grass and Remarks on The Formation of Lawns, see seperate page.

Fodder Plants.

Express or Freight charges always to be paid by the purchaser. If wanted to be sent by mail, postage must be added at the rate of ten cents per pound. As market is apt to fluctuate, quotations on 100 lb. lots of the following varieties of seeds given on application. 10 lbs. charged at 100 lb. rate.

Alfilaria. (Erodium Cicutarium.) Commonly called California Clover, Crane's Bill or Wild Geran-

ium, as it belongs to the same family. The seed is very scarce and hard to procure, owing to the difficulty in gathering free from weeds. As to quality it is one of the most nutritious of grasses; cattle, sheep, horses and hogs alike prefer it to any other natural product of the plains. It makes the sweetest milk and butter, and the best meat of any of the natural fodder plants of this State. the sweetest milk and butter, and the best meat of any of the natural fodder plants of this State. When nearly at maturity it is very fattening, and may be considered a strong, safe feed for grazing animals. We heartily recommend it for use on the large stock grazing ranges of Arizona and New Mexico. Sow 20 lbs. per acre. Per lb. 75c.; special prices given on large quantities.

Australian Salt Bush. (Atriplex Semibaccatum.) (See cut.) This forage plant which was introduced a few years ago from Australia, has already been grown here with the very best results, and we are continually hearing farmers speak of it in the highest terms, and the fact that a great many intend planting it very extensively this season speaks well for it.

The plants have a diffuse habit of growth each one when fully developed covering an area, 3 or 4.

The plants have a diffuse habit of growth, each one when fully developed covering an area 3 or 4 feet in diameter. It is much relished by stock, and supplies the salt so necessary to their well being. Its greatest recommendation, however, in the estimation of many farmers, is the fact that it will thrive better on alkali land than on any other. We are positively assured of the truth of this statement by farmers who have tried the experiment. We have seen specimens raised on alkali land, and cannot imagine anything more healthy looking or abundant. It is proved by analysis to be very nutritious, and contains, when dried, from 8 to 10 per cent, of salty matter. The yield is be very nutritious, and contains, when dried, from 8 to 10 per cent. of salty matter. about twenty tons of green fodder per acre, which will make five tons of hay.

The plant is perennial; if intended for a grazing pasture, it is better not to cut it the first year, but let the seed fall and thus form a sod. Prepare the land by plowing and harrowing as for other crops. The seed may be sown in beds or boxes and transplanted to from 8 to 12 feet apart, but it is better to sow it where it is to remain, either thinly broadcast or in hills, taking care in all cases to cover the seed VERY LIGHTLY. Use one pound of seed to the acre if sown broadcast or four ounces if transplanted. In cutting the fodder be careful not to injure the crowns of the plants.

Per package, 10c; Per ounce, 40c; Per pound, \$4.00.

Australian Salt Bush.

Hungarian Millet.

MILLETS.

French Round White, Imported. A very choice variety of Millet with large, round, pearly white seeds, used by the French for making into bread, generally sold in this country for feeding valuable foreign birds, Per lb., 15c; 100 lbs., \$12.00.

German, or Golden Millet. This variety is not so early as the Common Millet, but yields a much

larger crop. Will grow from three to five feet in height; the heads are closely condensed and the spikes very numerous. Seeds round, and golden yellow in color. It will yield two crops a season.

Has given great satisfaction wherever grown. Per lb., 10;c 100 lbs., \$4.50.

Hungarian (Grass) Millet. (Panicum Germanicum.) This annual forage plant is a Millet, and is one of the most valuable for a soiling crop, as it will grow in any ordinary soil, and will withstand the most severe droughts. It may be sown in this latitude middle of June. As a green crop for plowing in, it is very fructifying, (see cut.) Per lb., 10c; 100 lbs., \$4.50.

Italian Millet. (Selaria Italica.) This variety grows much larger than Hungarian Grass, and pro-

duces a heavier crop; not quite so early; heads nodding, four to six inches long, yellowish; seeds oval, slightly flattened, yellow. Per lb., 10c; 100 lbs., \$7.00.

Common Millet. (Panicum Miliaceum.) Very early; height two to three feet; foliage broad and

very abundant; heads open, branching panicles; seeds glossy, oval, somewhat flattened. Per lb., 10c; 100 lbs., \$4.00. The foregoing Millets should all be cut while in bloom.

Pearl, or Egyptian Millet. (Penicillaria Spicata.) This is quite distinct from all other species, and is without doubt destined to take a place in the front rank of vegetable forage plants. Sown in

light, sandy soil, the plants at first appear feeble, resembling Broom Corn; but when a few inches above ground they begin to tiller, and new shoots appear very rapidly from the original root. When cultivated for fodder the seed should be dropped in drills and given plenty of room, on account of the peculiar habit of tillering. The fodder is in the best condition for cutting and curing when the stalks are five to six feet high. Per lb., 30c; 10 lbs., \$2.50.

Evergreen Millet, or Johnson Grass. (Sorghum Halepense.) A perennial with fleshy underground stems, about the size of the little finger. These are very tender, and are much liked by hogs. They literally fill the ground near the surface, and every joint will develope a bud. On good ground, the stems attain a height of five to ten feet, growing about as thick as they can stand on the ground. It likes dry, hot weather, and will grow luxuriantly where it is too hot and dry for most other grasses. Sow early in the spring, at the rate of thirty pounds of seed per acre. The seed should not be sown until the weather becomes moderately warm. Per lb., 10c; 100 lbs., \$7.50.

FIELD PEAS.

These are sown for marketing dry, for split Peas, for fodder or for stock, and for soiling. Plant at the rate of 150 lbs. to the acre broadcast, or in drills at the rate of 80 lbs. per acre Sown at the rate of 100 lbs. to the acre, with an equal quantity of oats, they are cut and cured with oats either as hay or to be threshed; when both grains are bound together.

Black-eyed Marrowfat. Very hardy and prolific. Good for either soiling or fedder. Per lb., 10c;

per 100 lbs., \$4.00.

e Prussian. The boiling Pea of Commerce. Per lb., 10c; 100 lbs., \$4.00. Southern Cow Pea, Black Eye. This is not exactly a Pea, but more properly belongs to the Bean family. The pods may be harvested for the grain, and the plants plowed under to fertilize the soil. The seed or grain is ground and used for cattle fodder; the stalks and leaves also make excellent fodder, fed green. Poor, sandy land, may be greatly improved by plowing under a crop of Cow Peas, and thus made into fertile loam. Plant in a thoroughly pulverized soil. If grown for fodder or the seed, plant three and a half feet apart and cultivate thoroughly. The seeds must not be sown until the ground has become thoroughly warm. Per lb., 10c; 100 lbs., \$5.00.

Miscellaneous Fodder Plants.

(If ordered to be sent by mail, 10 cents per pound will be charged additional for postage.)

Jerusalem Corn. (See cut.) Lately introduced from Palestine, and will stand drought better than any of the non-saccharine Sorghums. The most valuable forage plant ever offered in in this climate. It has yielded five cuttings during the season. Height about five feet, and when matured, the grain is an excellent chicken food. Sow four pounds to the acre. Per lb., 10c; 100 lbs., \$5.00. Kaffir Corn, or Imphi. Introduced from South

Africa. This plant is low, stocky and perfectly erect. It does not tiller, but branches from the top joints. The whole stalk, as well as the leaves, cures into excellent fodder, and is good for green feed at all stages of its growth. When the grain turns white, clip the heads, and other heads will come. If required for fodder, sow in the spring, either broadcast or in drills, three feet apart at the rate of 10 lbs. per acre. If required for grain, sow 4 lbs. per acre. White, Red, and Black. Per lb., 10c; 100 lbs., \$5.00.

Brown Dhoura, or Egyptian Rice Corn. It is much sweeter than corn stalks, and cattle, horses and hogs will eat it ravenously. The seed is excellent for fowls. It stands firm against the highest wind, roots deep, and will endure without injury a drought, that sometimes ruins corn. Culture same as corn. Sow five pounds to the acre. Per lb., 5c; 100

lbs., \$3.00.

White Dhoura, or Egyptian Rice Corn. The yield of grain is very great, and cooked when the kernels are not fully ripe, like green corn, it has the flavor of chestnuts; or after fully ripe, cooked like rice, or ground into fine flour or meal, and used for baking. A favorite variety with poultry raisers. Per 1b., 5c; 100 lbs., \$3.00.

Large African Millet. A variety growing stalks eight to ten feet high, and yielding heads of grain twelve to fourteen inches long, weighing six ounces to half a pound when fully ripe. If the whole stalk is cut down and cured when the seeds are in the dough state, it makes excellent forage, easy to cure, keeps well in out-door shocks, and much liked by stock in the winter. If cut in the green state, it makes excellent green feed, and the shoots that spring at once from the root make a second crop of forage. It bears in dry weather and gives a crop where corn would wholly fail. Plant in early spring, in three-foot rows, leaving one to two plants every twelve inches in the row, and cultivate as corn. This variety will yield a heavy crop of forage. Per 1b., 10c; 100

White Milo Maize, or Branching Dhoura. Valuable as a forage plant and for its grain, having great capacity to stand drought. It can be cut and fed at any stage, or cured when heading out, for fodder. It bears grain in erect, full heads, and is almost equal to corn for feeding all sorts of stock; also makes excellent meal. It requires all summer to mature seed. Plant in April, three to five seeds in a hill, eighteen inches apart, four foot rows, and thin to two plants and cultivate as corn. It shoots out greatly and makes a great amount of foliage. Three to five pounds per acre. Can be cut for green feed several times a season. Average yield of seed about forty bushels per acre. Per lb., 10c; 100 lbs. \$6.00.

Yellow Milo Maize, or Yellow Branching Dhoura. Similar to the white as above described but of larger heads. Per lb., 10c; 100 lbs., \$6.00.

Sorghum, or Chinese Sugar Cane. (Sorghum Saccharatum.) Early Amber.—The earliest and most productive variety. Its saccharine matter is of first quality, fine and rich; it grows to the height of from ten to twelve feet; makes sugar or syrup equal to any in the market. One of our best green fodder plants, producing from two to three cuttings during the summer. The seed is relished by all kinds of stock. Sow six pounds in drills, and twelve pounds broadcast to the acre, Per 1b., 10c; 100 lbs., \$4.00.

Sorghum, Early Orange. A well-known variety, well adapted for the South; it is from eight to ten days later than the Early Amber; produces syrup of excellent quality. Per lb., 10c; 100 lbs., \$5.00.

Sorghum, Red Top, or Honduras. Attains a higher growth and contains more saccharine matter than the other varieties. Per lb., 10c; 100 lbs., \$5.00.

Lathyrus Sylvestris Wagnerii. (Flat Wood Pea.) Claimed to be the most profitable fodder plant ever grown. It is twice as nutritious as Alfafa and of equal value with oil cake for feeding purpurposes. Perennial, lasting over fifty years; the roots penetrating into the sub-soil from ten to eighteen feet. Has proved to be pre-eminently the plant for droughty, and barren soils. Sow in spring in rows and at the depth of one inch. With the pea sow a few grains of barley to indicate the position of the rows, as it will be necessary to hoe the ground before the Lathyrus appears above it. In the following spring transplant to one foot apart each way. 30c per oz; \$3.00 per lb.

Lupins, Yellow. One of the best plants for soiling, succeeding well in the poorest soil. Many lands that were formerly poor, have had their value greatly enhanced by plowing in this Lupin as a manure. Per lb., 15c; 100 lbs., \$12.00.

Rape, Dwarf Essex. A valuable fodder plant for sheep, yields an abundant crop and is very fattening; contains about nine per cent. of Carbo-hydrates, two per cent. Albumen and some fat. It is also exceedingly useful as a green manure; as soon as large enough it may be ploughed in or a flock of sheep may be allowed to graze on it for a few days before ploughing. For fodder, sow from 8 to 10 lbs. per acre; for soiling, sow from 15 to 20 lbs. per acre. Per lb., 15c; 100 lbs., \$10.00.

Seradella. (Ornithopus Sativus.) A valuable forage plant, admitting of two cuttings in one season, and succeeding well in dry, sandy soil. Excellent for sheep............Per lb. 25c.; 100 lbs. \$15.00.

Spurry.

Spurry. (Spergula Arvensis.) (See cut.) Small annual plant, succeeding best in sandy soil. It can be used in a green state, or for hay. Butter made from the milk of cows fed on this is considered of a superior quality in Belgium and Holland. Should be sown early in spring, fifteen pounds to the acre. Per lb., 20c; 100 lbs., \$15.00.

Sweet Corn. For fodder, ensilage, or soiling. Per 1b., 5c; 100 lbs., \$3.00.

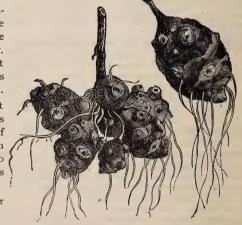

Tares, or Vetches. (Vicia Sativa.) A most valuable, forage plant. Also excellent as a green manure. Sow in early spring, with oats, barley or rye, which help to support it, and greatly add to its productiveness. When sown in conjunction with either of the above, 30 lbs. is sufficient for an acre; if alone 100 lbs, is required. Per lb. 10c; 100 lbs., \$9.00.

Teosinte. (Reana Luxurians.) Recommended as the most prolific forage plant yet introduced. In appearance somewhat resembles corn, but the leaves are much longer and broader. The stalk,

containing much saccharine matter, is very nutritious. It can be cut several times during the season, yielding enormously. One seed will sometimes produce twenty to sixty stalks or shoots. Should not be planted until the soil is perfectly warm in spring. Requires about four pounds of seed per acre. Plant in drills three feet apart, and two to three seeds every twelve inches in drill. Per oz., 20c; lb., \$2.00.

Jerusalem Artichokes. Well enough known in most localities. It is a tuberous rooted sunflower, and is said to be capable of producing 1,500 bushels of tubers to the acre. Hogs thrive when fed on Artichokes, which are not only food, but are said to supply sufficient water to allay thirst. Some farmers cure the tops for hay, (see cut.)

Common, and Red Brazilian, per 100 lbs., \$3.50; larger quantities, price on application.

Jerusalem Artichoke.

Sundry Seeds of Economic Plants, Etc.

Express or Freight Charges always to be paid by the purchaser. If wanted to be sent by mail, postage must be added at the rate of ten cents per pound. As market is apt to fluctuate, quotations on 100 lb. lots of the following varieties of seeds not given will be sent on application. 10 lbs. charged at 100 lb. rate.

Beans. Common English Horse Beans. Per lb., 10c; 100 lbs., \$400.

Beans, Soy. (Soja hispida.) Used in Soy Sauce; also as a folder plant. Per oz., 10c; lb., \$1.00.

Broom Corn. Improved Evergreen.—This variety is more cultivated than any other, on account of the color and quality of its brush, which is of good length, fine and straight, and always green; it brings the highest market price; grows about seven feet high. Per ib., 10c; 100 lbs., \$5.00.

Broom Corn. LARGE CALIFORNIA GOLDEN.—One of the most popular kinds for making brooms; it has the advantage of not requiring to be bent down until ready to cut, as the brush has a leaf or sheath around its base, which keeps it from crooking or bending over; grows about twelve feet high, brush long and very straight, of a green color, tipped with red when ripe. Per 1b., 10c; 100

lbs., \$5.00.

Broom Corn. DWARF.—This variety grows about four feet high, extra fine for making brushes or Dwarf.—This variety grows about four feet high, extra fine for making brushes or Per lb., 10c;

100 lbs., \$6,00.

Broom, Scotch. (Genista Scoparia.) The young growth of this Shrub is chiefly valuable as food for sheep and other animals in winter. Coarse brooms are also made from it. Per oz., 10c; lb., 50c. Caper Tree. (Capparis Spinosa.) The undeveloped flower buds are the true Capers of Commerce.

Flowers blush, very handsome. Per pkt., 25c.

Caterpillars. (Astragalus Var.) A curious plant, interesting from the fact that the Seed Pods resemble living Caterpillars. Much fun is caused by mixing them in salads. Per pkt., 10c.

Cotton. SEA ISLAND.—Best variety. Per oz., 10c; lb., 25c. Cotton. TENN. UPLAND.—Sow 25 lbs. to the acre. Per oz., 10c; lb., 25c.

Fenugreek. (Trigonella Fenum Græcum.) An annual, very fragrant. The seed is often used to give temporary fire and vigor to horses; also given to cattle while fattening, causing them to drink and digest their food; also useful as a green manure for plowing under. Per oz., 10c; 1b., 60c.

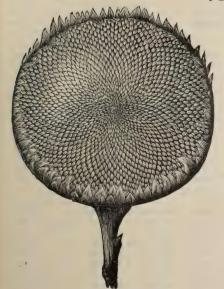

Flax, or Linseed. Best Riga. Per 1b., 10c.

Furze, or Gorse. (Ulex Europeus.) Sheep and cattle browse on the young growth of this plant, with much relish. Also valuable for hedges and fences. Per oz., 25c; 1b., \$2.50. Garvanzas, or Chick Peas. Largely used for soup. Per 1b., 10c. Hop Vine (Seed.) (Humulus Lupulus.) Well known. Per pkt., 25c; per oz., \$1.50.

Jute. (Corchorus Textilis.) A textile plant, the fibres of which are used for making coarse sacks and cloth. Sow in drills eight inches apart, four pounds to the acre. It will outgrow all weeds. May

also be sown broadcast; six pounds per acre. Per oz., 15c; per 1b., 75c.

Lentils. (Ervum Lens.) Best Imported. Succeed best in dry, sandy soil. A leguminous annual, the seeds of which are valuable for pigeons, and are also largely used for soups. Per lb., 15c.

Mammoth Sunflower.

Liquorice. (Glycyrrhiza Glabra.) In pods; a perennial plant, the roots of which furnish the Liquorice of com-

merce. Per. oz., 30c; lb., \$3.00.

Peanut, The peanut thrives and produces best on a light, sandy, tolerably fertile soil. They may be planted from March to May in the pod, or shelled, two in a hill; it is best to drop about four in a hill on the level ground, the rows being laid off three and a half feet wide, and the hills two feet asunder; cover them two or three inches. When they come up, thin them to two in in a hill. They will produce from 25 to 75 bushels per acre, according to soil and culture. Virginian, per lb., 15c; 100 lbs., market price. California grown, per 100 lbs., market price.

Poppy. OPIUM. The seed furnishes about thirty-five per cent. of an agreeable sweet oil, good for eating, painting and illuminating. May be sown in spring, either broadcast or in drills, covering with but little earth. Also cultivated for opium. Per oz., 20c; 1b., \$1.00.

Pyrethrum Cineraræfolium. The plant from which is made the Persian Insect Powder in Europe, or "Buhach" as made in California. Per pkt., 25c; per oz., \$1.00.

Ramie. SILVER CHINA GRASS. (Urtica Nivea.) This is the variety now so extensively cultivated in the South for its fibre. The seed should be germinated by sow-ing it on cotton, floating in a tub of lukewarm water, and

transfering it to a bed, screened from the sun. When the plants are four inches high, transplant to a field, in rows four feet apart each way; and when the plants are three feet high, turn them over and peg to the ground, after which cover them with earth, and they will start in every direction, completely covering the field in a short time. Per oz., 75c; 1b., \$9.00.

Scurvy Grass. (Cochlearia Officinalis.) Used in salads same as Cress. A good antiscorbutic. Per oz.,25c.

Sunflower. (Helianthus Annuus.). The Sunflower is rapidly acquiring a reputation as a valuable farm crop. Its seeds are superior food for poultry (said to improve the meat), and it has yielded 40 bushels per acre. The leaves are claimed to make excellent cattle fodder, and the stems may be used for fuel.

Russian Mammoth. (see cut.) Very large. Per lb., 15c; per 100 lbs., market price.

BIRD SEED.

Our Bird Seeds are always recleaned, fresh and sweet. Rancid and musty seed is injurious to your birds. If required by mail, 10 cents per pound must be added to prepay postage.

HINTS ON THE FORMATION AND IMPROVEMENT

→ OF +----

Garden Lawns, Tennis Grounds and Parks.

The preparation of the Lawn is usually preliminary to the laying out of the Flower Beds in new grounds. This should be carefully done, as if this work is imperfect, it cannot afterwards be remedied. unless by undoing the work done, and redoing it in a proper manner. The first thing to be done is to get the ground to the proper grade desired. Then dig or plow up the ground to the depth of eight inches, afterward carefully harrowing and removing all large stones, etc. If the soil is thin, procure a supply of fine mould and spread over to a depth of five inches. If the soil is poor, well rotted stable manure, well incorporated with the soil, will be very beneficial; or if this is unobtainable, 500 pounds of ground bone per acre may be applied. Then rake level, and roll well the soil to make a firm bottom. When sowing the seed, choose a calm, damp, cloudy day, and sow at the rate of 150 pounds per acre (one pound will sow well 16 feet square). The seed should be carefully raked in, and again well rolled. In dry weather, regular and careful watering is strictly essential. Never let the ground dry out. Should the surface once become powder dry while the seed is germinating, the latter would inevitably perish. When the grass is up to the height of three inches, it should be cut and rolled, and cutting should be repeated every week till the grass has become firm and turfy. When weeds appear they should be carefully cut out with a sharp knife, care being taken to disturb the young grass no more than is absolutely necessary. With the most careful sowing and attention some bare spots will be found in the Lawn; these may be filled up by scoring the spots with a steel rake, and then resowing and raking in more seed. A light dressing of manure or bone-dust should be applied to every Lawn annually, and the roller should be used frequently during winter when the state of the ground and the weather will permit.

To Grass a Bank or Terrace. For each square rod of land take 1 lb. of grass seed, and thoroughly mix with four cubic feet of good, dry, garden soil. When well mixed, add water enough to bring the whole to the consistency of soft mortar. After the slope is properly graded and watered, spread the paste over as thinly and evenly as possible.

Finest Mixed Dwarf Semi-Tropical Lawn Grass, for producing a fine, close and velvety turf, improving lawns, croquet grounds, etc. This mixture we have made up especially for Southern California. It will be found to thrive with much less watering than is required to keep a Blue Grass Lawn in condition. We have aimed to supply only those grasses which are suitable for dry soils, and which we know will grow satisfactorily in our climate, and as the principal portion of the finer grasses thrive better growing together than separately, a more lasting sod, than can be obtained by Blue Grass, may be expected. Per lb., 40c.; 100 lbs., \$35.

Kentucky Blue Grass. Extra, fancy cleaned. The grass usually sown for lawn purposes. Per 1b., 25c.; per 5 lbs., \$1.00; 100 lbs., market price.

Tennis Grounds.

From Seeds.

REMARKS ON SOWING AND CULTURE.

We have heard it remarked that the position of a person or nation in the scale of refinement and

civilization may be judged by his or their love of two things, viz: Music and Flowers.

The use and growth of flowers, especially, marks the progress of individuals and nations, the greatest nations of the earth being those with whom the love of Floriculture most prevails. To the lover of flowers, what can be more interesting than to sow the seed, water, and otherwise care for the growth and development of the plant, and, at last, enjoy the expansion of the flowers? What does the sense of proprietorship of the purchaser of flowers compare to that of the grower of them? The latter feels that they are verily his own, the results of his fostering care. Among the Flowers which may be grown with a minimum amount of care and expense are those varieties which reproduce themselves from seeds. These are classed as Annuals, Biennials and Perennials, and these are subdivided into Hardy, Half hardy and Tender varieties of each class. Hardy Annuals are those plants which may be sown in the open They grow, flower, produce seed and then die. Half Hardy Annuals are those varieties which require an even temperature of at least 60 degrees to germinate the seed, and will not stand frost; consequently they must not be sown in the open ground during the fall or winter months, and not in spring till April. A good rule for those to follow who wish to sow this class is to wait for the proper weather and season in which to sow Corn, Melon or Pumpkin Seeds. These being Half Hardy Annual Vegetable Seeds, it follows that Half Hardy Annual Flower Seeds may be sown without risk at the same time.

Tender Annuals are those that require greenhouse protection, as Calceolaria, etc. The seeds are

usually very fine, and it requires skill and care to raise them.

Hardy Biennials are those that flower the second year from sowing the seed and then die.

Hardy Perennials are among the finest of our border plants. They do not usually flower till the third year after sowing, but may be relied upon to produce larger clumps of flowers year by year for many years. Half Hardy Perennials are those which require some protection during the coldest weather as they will not stand frost. Tender Perennials are those species that require Greenhouse or other protec-

tion during the greater part of the year, as they are, generally speaking, natives of tropical countries.

The best time to sow *Hardy Annuals* is in the fall months, as they will make much stronger plants, and flower much more abundantly when wintered over. They may be sown in any finely prepared shady border, and transplanted, when large enough, to where they are to flower. Do not cover the seeds too deep. A good rule is to cover each seed its own depth with soil, at the same time taking care to water carefully. Never water so much that the soil gets "soggy," i. e. saturated; nor never let the top get dry Most varieties will germinate within ten days.

They may also be sown any time during the spring months for summer blooming, care being taken

to shade the young plants, after transplanting, in hot weather.

Half Hardy Annuals may be sown in April out of doors, or in boxes in March or earlier. If in boxes they should be covered, or removed under cover, during the night time, and during heavy rains. Those who have hot beds may sow the seed in February and grow the plants in 3-inch pots, for planting out doors in April, thus gaining two months on those who have not this advantage. (See Instructions for making hot-beds, in Calendar of operations.) If sown in boxes, the boxes should have an inch of rough soil, or gravel, at the bottom for drainage; the remainder of the box should be filled within an inch of the top with sifted, light, rich soil, firmly pressed, and the seed should be sown, covered its own depth with soil, again pressed and watered. When the young plants are large enough to be handled, prick out into other boxes, planting them about one inch apart, and, when weather permits, they should afterwards be planted in the open ground to the place where they are to flower.

Tender Annuals should be sown in pots as follows: Take a 5 or 6 inch flower pot, put an inch of

drainage in the bottom, then two inches of finely sifted soil, firmly pressed, with a sprinkling of sand on top. Then sow the seed, and do not cover, but press it into the soil. Water with a very fine sprinkler, and cover the top of the pot with a sheet of glass. Remove the glass for an hour daily to dry up the damp. When seedlings appear, gradually harden them off to the air. As soon as they can be handled prick out into 2-inch pots, and shift again when necessary.

Hardy Biennials and Perennials should be sown in September. Many varieties, if sown then, will flower the next year. If sown in spring they will not flower till a year later. They may be sown in a shady border, and when large enough, transplanted to where they are to remain.

Half Hardy and Tender Perennials should be sown in boxes, and treated as recommended for Half Hardy Annuals, till plants appear, when they should be pricked into 2-inch pots, and shifted afterwards when necessary.

We have arranged our list of Flower Seeds, according to the various classes. Annuals (including separate lists of Ornamental Grasses, and Gourds, and Everlasting Flowers.) Climbers, Annual and Pe-

rennial, and Biennials and Perennials in separate list.

Abbreviations: hh means Half Hardy, Annual or Perennial; t means Tender Annual or Perennial. Where no abbreviation is used, the variety will prove hardy in this climate. The letter h affixed to a variety, means that it is useful for boquets and cut flowers.

Seeds of Australian Plants of late Introduction.

From our Novelty List of 1894 and 1895.

ALL THE TREES AND SHRUBS ARE EVERGREEN.

The following varieties were collected for us and include the Cream of the Australian Flora. They will all prove hardy in Southern California, and in the Eastern and other States would be invaluable to nurserymen and others, as new flowering Pot Plants, requiring only cool greenhouse treatment in winter. They will succeed if kept from actual frost. Price of each packet, 25c; per dozen packets, purchaser's own selection, \$2.50; our selection, per dozen, \$2.25. We append brief descriptions: Acacia Linifolia. (Flax-leaved). An ornamental shrub, growing to the height of 6 feet, with yellow

flowers, growing in heads 2 to 4 together.

Actinotus Helianthus. (Australian Sunflower). A handsome herbaceous perennial, with white flowers is umbels. Height, 2 feet.

Bauera Rubiœfolia. A small shrub, with lanceolate leaves and pale red flowers, blooming nearly throughout the year. Height, 2 feet.

Billardiera Scandens. A very desirable evergreen climber, with cream colored flowers, changing to purple, and bearing edible fruit.

Blandfordia Nobilis. A beautiful Amaryllis-like plant, bearing orange flowers, with yellow margins. Height, 2 feet.

Boronia Serrulata. (Australian Rose). An elegant and useful shrub, bearing deep, rose-colored, fragrant flowers, with dotted leaves. Height, 5 feet.

Bossiæa Scolopendrium. (Plank Plant). A curious shrub, with flat, naked, toothed branches, the teeth bearing yellow and red flowers. Height, 6 feet.

Callicoma Serratifolia. A shrub attaining the height of 4 feet, with serrate leaves and yellow flowers. Callistemon Pinifolia. A handsome shrub resembling Metrosideros, with narrow Pinus-like leaves, and crowded scarlet inflorescence. Height, 4 feet.

Calythrix Tetragona. A very pretty and interesting heath-like shrub, with white flowers. Height, 2

Cassinia Alba A handsome shrub, with numerous whitish yellow flowers. Height, 4 feet.

Ceratopetalum Gummiferum. A gum-bearing tree, with very ornamental yellow flowers in terminal panicles. Height, 30 feet.

Clematis Aristata. A very rare variety, with greenish yellow flowers. A fine climbing plant.

Correa Speciosa. A slender growing, elegant shrub, bearing pendant flowers of bright scarlet, tipped with green. Height, 3 feet.

Crowea Saligna. (Willow-like). A very useful decorative shrub, with lanceolate leaves and bright pink flowers. Height, 2 feet.

Daviesia Ulcina. An elegant shrub, growing to the height of 5 feet, with profuse racemes of orange yellow flowers

Dillwynia Ericofolia. A very ornamental, heath-like shrub, with yellow flowers and numerous slender leaves. Height, 3 feet.

Eleocarpus Cyaneus. A handsome small tree, with white flowers and blue fruits. Not edible. Height, 15 feet.

Eriostemon Nerifolium. (Oleander leaved). A beautiful shrub with lanceolate leaves and bright pink flowers. Height 3 feet.

Gompholobium Latifolium. A handsome shrub with golden yellow flowers an inch long. Height 2 feet. Grevillea Hillii. A fine small tree, with evergreen, poplar-like leaves. Height, 15 feet.

Grevillea Incarnata. A handsome shrub, with tomentose leaves, and flesh-colored flowers. Height,

Grevillea Linearis. A low growing shrub, with flowers of a bright red, tipped with yellow. Height 3 ft. Grevillea Punicea. An erect shrub, with bright scarlet flowers; very fine and rare. Height, 5 feet.

Hoyea Longifolia. A handsome shrub, with intense purple flowers and oblong lanceolate leaves. Height, 10 feet.

Indigofera Australis. A handsome species, with pinnate leaves, and rose colored flowers. Height 4 ft. Jacksonia Scoparia. "Australian Dog Wood." A curious leafless shrub, with yellow flowers in onesided racemes. Height, 4 feet.

Lagunaria Patersonii. A handsome small tree, with flowers, somewhat resembling a double Hibiscus in form, blush colored. Height, 20 feet.

Leptomeria Billardierii. (Australian Currant). A slender shrub, attaining a height of 6 feet, with minute white flowers, disposed in numerous spikes. Fruit greenish red, edible.

Mirbelia Speciosa. A showy shrub, with terminal, purple flowers. Height, 2 feet. Monotoca Scoparia. An Epacris-like shrub, with white flowers. Height, 5 feet.

Olearia Dentata. A beautiful shrub, with rosy white flowers, and densely tomentose branches and Height 2, feet. leaves

Oxylobium Trilobatum. A low-growing shrub, with bright yellow flowers, in terminal racemes, and leaves somewhat resembling the holly. Height, 2 feet.

Patersonia Sericea. A handsome perennial of the Iris family, with deep violet blue flowers, in many flowered spikes, usually I foot or more in length; very fine.

Persoonia Lanceolata. An ornamental shrub, with yellow flowers and lanceolate leaves. Height 4 ft. Petrophila Pulchella. A pretty shrub, with white flowers and pinnate leaves. Height, 8 feet.

Pimelia Linifolia. A compact-growing shrub with flax-like leaves and white flowers in globular heads. Branches slender and twiggy. Height, 3 feet.

Platylobium Formosum. A beautiful shrub with curious yellow flowers. Height, 4 feet.

Prostranthera Violacea. (Australian Mint Tree). A handsome shrub with strongly-scented foliage

and bluish purple flowers. Height, 4 feet.

Pultenea Stricta. An upright growing compact shrub with bright yellow flowers. Height, 3 feet. Smilax Glycyphylla. (Australian Smilax or Tea Plant). A climbing plant with sweet leaves and greenish white flowers.

Telopea Speciossissima. (Waratah, or Australian Tulip). One of the most gorgeous and showy shrubs yet introduced. Flowers crimson-scarlet in large heads, which are discernible at a great distance. Height, 8 feet.

Thysanotus Junceus. (Australian Fringed Lily.) A very elegant plant of the lily family, with purple flowers and rush-like leaves. Stems slender and loosely branched. Height about 2 feet. Viminaria Denudata. (Australian Rush Broom). A curious plant with rush-like stems, and orange

yellow flowers, in long terminal racemes. Height, 10 feet.

Xanthorrhea Hastilis. (Australian Grass Tree). A very ornamental plant, with leaves 3 to 4 feet in length; spear-shaped. Flowers white, on spikes 11/2 to 2 feet in length. A very conspicuous plant. ZAMIA SPIRALIS. A beautiful Cycad. Like other varieties of this group it is intermediate between the Tree Ferns and Palms. This is one of the best of the genus. Per seed, 10c.

Tree and Shrub Seeds.

The importance of Timber Culture is universally recognized. History shows that many countries occupied by some of the greatest nations in ancient times, and which were then fertile and productive, have been rendered sterile and barren, owing to the denudation of their forests, as nearly every one knows.

Trees especially on hillsides, are absorbent, retentive and retard evaporation, thereby assisting to prevent floods in winter and drought in summer. The supply of fuel is also a vital question for Southern California, and to attain that end, the varieties of Eucalypti and other rapid-growing trees

are being largely planted.

The value of Trees for shade and shelter purposes need not be enlarged upon. In raising all kinds of Tree Seeds successfully, the process of growth and germination in their natural habitat should be imitated as closely as possible. Thus the cones of Conifers shed their Seed, which falls under the tree, generally on a light soil, enriched by generations of fallen needles or "tags," at the same time it is sheltered from too much wet by the pyramidal thick foliage of the tree, which also shades the young seedlings from the direct hot sun, and thus protected, under somewhat humid conditions, germination is sure and rapid. On the contrary, Seeds of Deciduous Trees lie exposed on the surface of the ground to the action of the rain and frost, till the spring, when the weather being sufficiently warm, they germinate rapidly. As a rule, all Tree and Shrub Seeds germinate slowly, compared with vegetable or Flower Seeds.

All hard Seeds, as Acacias, Locust, Gymnocladus, Osage Orange, etc., should be soaked for 24 hours in warm water, say at 120 degrees, before sowing, or where practicable, strew dry leaves or bushes

over the hade after serving and matering and set fire to them

over the beds after sowing and watering, and set fire to them. Deciduous Tree Seeds should be planted in this section in winter or very early in the spring, as most of these seeds lose their vitality very rapidly. The soil should be well prepared, rich and deep; and the Seed should always be sown in drills, and the ground kept thoroughly free from weeds. Evergreen Tree Seeds should be sown in boxes or pans, thoroughly well drained, and should be protected from the sun by being placed under the shelter of a hedge or fence. They are best sown in spring or fall, and should be carefully transplanted when necessary.

As many Tree Seeds are collected in distant countries, and will sometimes fail to germinate, although they may appear well enough to the eye, we wish it to be distinctly understood that we will not in any way be responsible for their failure; but, at the same time, we will use every endeavor to supply

only the best.

All Tree and Shrub Seeds quoted in this list at less than 50c per ounce we can supply at 15c per packet; those quoted at 50c and upward per ounce, 25c per packet. No deviation from this rule. No half ounces of any Tree Seeds supplied that are offered at less than \$1 per ounce.

[&]quot;Handbook of Tree Planting. Where, Why, What, and How to Plant." Mailed free, 80c.

AUSTRALIAN TREE AND SHRUB SEEDS.

We make a separate category of these, as from their value they are worthy of it. The visitor to Australia, at any season, will at once notice that all the indigenous vegetation is evergreen. The writer

does not know one deciduous tree or shrub native to that country.

The most valuable are, of course, the Eucalypti. These possess great antiseptic properties, and are, no doubt, also of great value in absorbing moisture from the bottom soils, thus preventing malaria. Their value as rapid growing timber is also great, some varieties making excellent fuel, while others are nearly uninflammable, but are useful in carpentry, and for railway ties, platforms, piles, jetties, etc. Others are very ornamental, bearing showy flowers. Height Price Price

		in feet	per oz.	
Acacia	Albicans. Flowers whitish yellow. Very compact	6	\$1.00	per in-
6	Armata. "Prickly Acacia." Much used for hedges. Good for the sea coast		.40	\$4.00

	and jetties	150	1.00	
	Quadrivalvis. "Coast She Oak," Very valuable for sea coast culture, to			
	prevent the inroads of the sea upon sand hills. Of quick growth. Wood			
	valuable for shingles, etc.	60	1.00	
66	Stricta. "She Oak." Is tougher than the other species. Excellent wood for			
	tool handles	30	1.00	
66	Suberosa. "Erect She Oak." A beautiful shade tree. Valuable for fuel	60	1.50	
6.6	Torulosa. "Forest Oak." Wood very valuable for timber, also for fuel,			
	burning to a clear white ash, and leaving no cinders	75	1.00	
Eucalvi	ptus Amygdalina. "Messmate Gum." Belonging to this variety are the			
	tallest trees in the world. In Gippsland, Australia, are trees over 500			
	feet in height. Makes first class timber for flooring boards, scantling,			
	ctc., and is well suited for avenue planting. Yields more essential oil			
	than any other variety	400	1.00	
66	Baileyana. Timber splits easily and is straight-grained. Much used in			
	Queensland for shingles. Branches spreading, with dense foliage	100	1.50	
	Bicolor. [Black Box]. Timber of great strength and durability. Use-	200	2.00	
	ful for piles and railroad ties	150	1.00	
66	Callosa. Not to be confounded with "Collossea." A scarce variety from	100	1.00	
	Western Australia. Timber of good quality, and more easily worked			
			2.00	
	than most of the other kinds. Also good for fuel	200	00.00	

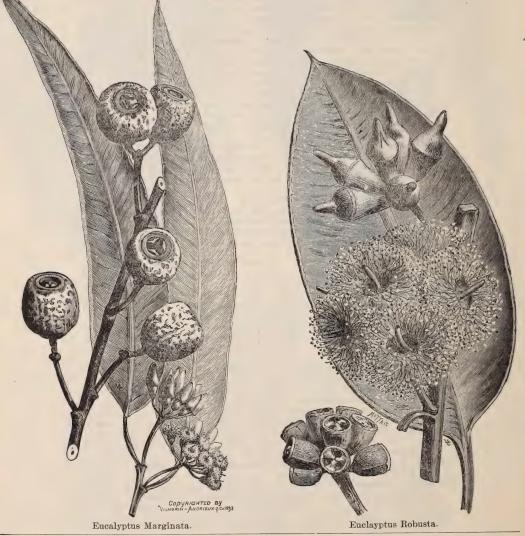

Price Price per oz. per lb. Eucalyptus Calophylla. Ornamental, of rapid growth, with white flowers. Timber 1.50 scented foliage, supplying also an useful timber. Being a native of Queensland it is more tender than most other kinds..... 3.00 Cornuta. "Yale Tree." A rapid growing variety, and very hardy.
Wood very durable, heavy and elastic, and considered equal to Ash...
Corymbosa. "Blood Wood." Wood of a dark red color, easily worked 1.50 while fresh, but when dry becomes very hard. Useful for fence posts and railroad ties, being durable under ground. The numerous gum veins render it of little use for sawing purposes..... 1,50 Corynocalyx. 'Sugar Gum.' Very ornamental, rapid growing with dark green leaves. Highly valued in this vicinity. Timber very dur-1.50 15.00 and piles... 1.50 Ficifolia. [Scarlet-flowered Fig-leaved Gum]. The most ornamental of the family. Flowers bright crimson, produced well above the foliage. One of the most effective trees in cultivation. Per 100 seeds, \$2.00; 20 seeds, 50c...... ssilis. "Victorian Yellow Gum." A large, rapid growing variety. Wood easily split, straight grained, and used for floor boards, scant-Fissilis.

		Height in feet.		
Eucalypti	s Globulus, "Tasmanian Blue Gum." (See cut.) Well known; one of		per oz:	per ros
Zimoun'j pot	the most useful of all, and a very rapid grower. Planted largely in			
	all warm countries, on account of its malaria destroying qualities. Remarkably good for fuel, being easily sawn and split. Imported seeds	150	.50	5.00
	California saved seed.	100	.30	3.00
£€.	Goniocalyx. "N. S. W. Blue Gum." (See cut.) Wood very durable, hard and tough. Much used in its native country by wheelwrights.			
		200	1.00	
"	Gunnii. "Tasmanian Cider Tree." Probably the hardiest of the genus.			
	Will stand a considerable amount of frost. Recommended for all elevated and exposed positions. Good for fuel	80	1.50	
66	Homastoma. "White Gum. Good for fencing and rough building ma-			
"	terial, also makes a fair fuel. Grows particularly well on sandy soil Hemiphloia. "Common Box." Wood very hard, strong and durable	150	1.50	
	above ground. Also a first class fuel for all purposes		1.00	
46	Leucoxylon. "Victorian Ironbark." Very hard, strong and durable, ex-			
	celling Hickory in strength. Recommended for underground work in mines, and for railroad ties, bridges, etc		2.00	
"	Longifolia. "Woolly Butt." A large tree, of great girth, growing well in			
	any soil. Timber is durable and makes excellent fuel. The leaves yield a volatile oil		1.00	
46	Maculata. "Spotted Gum," Wood as strong as Euglish Oak. Extensively	200	1.00	
44	employed in ship building and wheelwright's work	100	1.50	
	Marginata. "W. A. Jarrah." (See cut). Impervious to teredo and ants, and much sought after for jetties and piles, and largely exported for			
	railroad ties. The timber is easily worked and takes a beautiful pol-			
	ish. Furniture made from this wood is much admired. It is of quick		1.50	
46	growth and of immense size. Suited to dry, barren soils	200	1.00	
	stout stem, and makes excellent fuel. The young trees are largely used			
	for telegraph poles, and the flowers are much sought by bees. One of the strongest and most durable timbers in the world		1.50	
46	Obliqua. "Stringy Bark." A quick grower and produces the best wood			
	for flooring, scantling and shingles. Inferior as fuel, but makes the best charcoal for the forge	300	1.00	
"	Obtusifolia, "Yellow Blackbutt." A rapid growing variety, very good			
46	for fuel. Also useful for staves, cooper's and wheelwrights' work Paniculata, "White Iron Bark." Wood hard and durable, excellent for	120	1.50	
	railroad ties. Also much used for building and fencing, as it splits well			
66	and is lasting under ground	150	1.00	
	Paniculata Microphylla. "She Iron Bark." Leaves smaller than those of the preceding variety. Wood softer and easier to work, than that of			
46	the other Iron Barks. Also good for fuel	100	1.50	
	Pilularis. "Black Butt." Of rapid growth. One of the best timber yielding species, much used for flooring boards, railroad ties and telegraph			
45	poles	300	1.50	
44	Piperita. "Peppermint Gum." Timber valuable for shingles, fence rails, etc. Yields a greater quantity of oil than any other variety, and			
	is of remarkably quick growth Polyanthema. [Australian Beech.] The timber is much used for min-	300	1.50	
46	Polyanthema. [Australian Beech.] The timber is much used for mining purposes, and for all underground work, being remarkably hard			
	and durable. Also an excellent fuel	150	1.50	
66	Regnans. [Royal Mountain Ash.] A very scarce variety, growing to a			
	large size, and very hardy. Grows on the high slopes of the Australian Alps, near the snow line. Timber durable, and excellent for fuel. Per			
£ ¢	pkt., 25c	200		
	Resinifera. "Forest Mahogany." A superior timber, of large size, prized for its strength and durability. Fine for interior house work	200	1.00	
"	for its strength and durability. Fine for interior house work			
	especially near the sea coast. Timber strong and durable, and is much used where strength and resistance to strains is required. A remarka-			
	bly healthy, robust variety. Much used for street planting in this vicinity	150	1.50	
66	Rostrata. [Red Gum]. Well known, and highly esteemed in this section. The timber is unsurpassed for durability, and is used for railroad			
	ties, street pavements, ship building, etc	200	.75	7.50
	Saligna. "Weeping Gum." Very ornamental. Leaves and general habit			
£ £	are like the "Babylonian Willow." Good for fuel	75	1.50	
	and may be used for all purposes where Hickory or Ash are at present	150	1 50	
	used. It splits easily, and is soft to work. Also a most excellent fuel Siderophloia. "Red Iron Bark." Wood very hard, light colored and heavy,	190	1.50	
	of great strength and durability, and is used for railroad ties, spokes,

leaved plants.			
Jacaranda Mimosæfolia. "Brazilian Jacar			
anda." A handsome tree with fern-like foliage, and magnificent clusters o			
light blue flowers. Hardy in this vicin			
ity. In colder localities would require			
protection. 75c per 100 seeds, \$6 per 1000			
Juniperus Virginiana. (Red Cedar). A			
well known American tree. One of the best as a windbreak, and it will stand			
clipping and trimming to any desired			
Ficus Elastica. form.	. 50	.20	1.50
Libocedrus Decurrens. "California White Cedar." Native of this coast from Sar			
Diego to Oregon. Well adapted for windbreaks, and can be used for hedges Wood light and strong, and can be used for fence rails, etc	100	.40	4.00
Ligustrum Japonicum. "Japan Privet." A strong growing shrub, and one of the	. 100	.10	4.00
best hedge plants. Will bear trimming to any desired form. Flowers white	. 12	.25	2.50
Magnolia Grandiflora. (Large flowering Magnolia.) A native of the Southern			
States, where its presence indicates good soil. The noble, cup-shaped, pure white flowers, and its large green leaves, brown underneath, render it par excellence	2		
the king of evergreen trees. Thrives and flowers well in California		.25	2.50
Mahonia Aquifolia. A native shrub, bearing yellow flowers, succeeded by clusters of	f		
blue berries.	. 5	.30	3.00
Oreodaphne Californica. "Native Bay." A well-known native tree, growing between the coast mountains and the sea	30	.30	3.00
Parkinsonia Aculeata. "Jerusalem Thorn." A very ornamental shrub, with foliage		.00	3.00
similar to some Acacias. Flowers yellow, sweet scented, in pendulous racemes			
May also be used for hedges in warm situations. Per pkt., 15c	. 10		
Pinus Austriaca. (Black Austrian Pine.) Remarkably robust, hardy and of spreading habit. Leaves long, stiff and dark green, and of rapid growth. Very	7		
valuable for lawn planting in this country	. 100	.15	1.50
valuable for lawn planting in this country "Canariensis. ("Canary Island Pine.") Very robust and healthy, with bright	t		
green leaves. Grows nearly as fast as the "Monterey Pine." We can highly	7	.60	6.00
recommend this variety for this section. "Cembra. "Stone Pine." Handsome conical form, erect and branching	. 50	.15	1.50
"Contorta. [Mugho.] "Twisted Pine." A small tree, with wide, spreading	2		0
and somewhat twisted branches. Native of Oregon	. 30	.60	6.00
"Coulterii. [Macrocarpa.] "Big Cone Pine." A fine native tree, of very robus			
growth, with bluish-gray leaves a foot in length. Has the largest cone of all pines, sugar-loaf shaped, and edible.		.40	4.00
"Insignis. "Monterey Pine." This well-known native variety is of very rapid	1	123	
growth, and succeeds well in any kind of soil. Should be allowed plenty	7	05	0.50
of room	. 80	.25	2,50

	Height in feet.	Price	Price
Pinus Laricio. "Corsican Pine." A large, rapid-growing, majestic tree, resembling			
the Austrian Pine "Maritima. "Seaside Pine." Well adapted for planting near the sea, thriving	. 80	.30	3.00
well in a saline atmosphere	60	.15	1.00
carpentry "Sylvestris. ["Scotch Fir."] The economic value of this tree is well proven.	100	.25	2.50
Growing in the most sterile soils, the humus, or decayed vegetable matter, formed by this tree, will double that from any deciduous variety. Wood valuable, though usually more knotted than that of the White Pine		.15	1.25
Picea Amabilis, "Lovely Silver Fir." Leaves bright green above, silvery underneath. A beautiful evergreen for lawns. Native of Oregon "Concolor. "Black Balsam." Native of the Pacific Coast, growing on the	80	.75	7.50
mountains at an elevation of 5000 feet and upwards	100	.75	7.50
white and coarse grained, useful for flooring, etc. Native of California and Oregon "Nobilis. "Noble Silver Fir." Leaves 1½ inches long, rigid, curved upwards,		.60	6.00
white underneath. Found extensively around Mt. Shasta. A majestic conifer	200	.60	6.00
Pittosporum Tobira. A handsome shrub. Native of Japan. The leaves are dark green, shining, oblong and borne in whorls. The bush is of uniform globular shape, and almost covered in summer with white flowers resembling orange blossoms, and fully equal in fragrance. Per pkt., 50c; 100 seeds, \$1.00.	10		
Schinus Molle. "Mexican Pepper Tree." A well-known handsome shade tree, with light feathery foliage, and bright scarlet berries. Habit very similar to the			
Weeping Willow	50 .	.10	1.00
Sciadopytis Verticillata. "Japan Umbrella Pine." Curious and remarkable. Leaves are a dark glossy green, crowded into whorls at the joints of horizontal			
branches. Very ornamental. Per kpt., 25c.	15		
Sequoia Gigantea. "California Big Tree." The biggest of all trees, and probably the most long lived. Specimens are often found 400 feet in height. Wood soft and white, when first felled, afterwards it turns red. It is very durable and makes a handsome park tree	300	1.00	10.00
"Sempervirens. "California Redwood." Well known. Wood reddish, soft, close veined, easily split, light and brittle, but very durable. It luxuriates in the cool dampness of sea fogs. Ornamental for lawns	500	2.00	10.00
or parks	200	.40	4.00
Solanum Erectum. [Betaceum.] "Guatemala Tree Tomato." A handsome evergreen of good form, and bearing yellow fruits the size of an egg, with a pleasant sub-acid flavor, and which may be eaten raw, or made into an agreeable jelly.			
Per pkt., 25c.	8	4.00	
Sterculia Platanifolia. "China Parasol" Tree. Very ornamental, with large, plane-like leaves. This makes an excellent tree for avenue or park planting	40	.40	4.00
Thuja Aurea. "Golden Arbor Vitæ." A dwarf Chinese variety; compact and globular in shape; top foliage yellowish green; very suitable for lawns, cemeteries, etc	6	.40	4.00
growth. It retains its golden color the year round. One of the prettiest	4	1.00	
dwarf evergreens for the lawn			9 50
globular form. "Gigantea. "Giant Arbor Vitæ." A very large and graceful tree. Native of	5	.35	3.50
"Occidentalis, "American Arbor Vitæ," or "White Cedar," A common and		.75	7.50
well-known tree. Native of the Atlantic States	50	.30	3.00
the lawn.	10	.25	2.50
Torreya Californica. "California Nutmeg." A symmetrical tree, with a clear, straight trunk. Wood light colored, close grained, hard and firm	60	.20	2.00
Viburnum Tinus. "Laurustinus." One of the finest winter flowering shrubs, blooming abundantly during the winter. Flowers waxy white in clusters. Also a valuable hedge plant	12	.20	2.00
Vitex Agnus Castus. "Chaste Tree." An aromatic evergreen shrub, with whitish-blue flowers, very ornamental	15	.15	1.50

	in feet.	per oz.	per lb.
Sophora Japonica. "Japanese Sophora" An ornamental, medium-sized tree, with			
fern-like foliage, producing large bunches of cream colored flowers. Of			
rapid growth, and will thrive in any soil.	20	.25	2.50
" Japonica Pendula. "Weeping Sophora." One of our most ornamental			
weeping trees, with long trailing branches, the bark of which is bright green	12	.25	2.50
Syringa Vulgaris. "Purple Lilac." The common variety. One of the best; flowers			
and young foliage fragrant.	8	.30	3.00
" Vulgaris Alba, "White Lilac." One of the best white varieties	8.	.30	3.00
Tamarix Canariensis. Has foliage somewhat resembling a Juniper. Good for plant-			
ing near the sea coast, or in any exposed situationper pkt., 25c	10		
Ulmus Campestris. "English Elm." A noble ornamental tree, with wide spreading			
head and drooping branches.	150	.15	1.50
Virburnum Opulus. "Snowball," or "Guelder Rose." An interesting shrub, with			
compact heads of snowy white flowers.	15	.20	2.00°
Weigelia Rosea. A vigorous spring flowering shrub, with fine, rose-colored flowers;			
should be in every collectionper pkt., 25c	3		

Pruit Seeds.

CULTURAL DIRECTIONS.

Apple, Pear and Quince. The seeds of these varieties may be planted any time during the winter or early spring. Soak the seeds in tepid water for three days, and change the water each day, or soak

in cold water for eight or nine days, then sow lightly in drills two feet apart.

Cherry, Plum, Peach, Almond, Etc. The cultural directions given for the Walnut, so far as germinating the seed is concerned, may be followed; should however, the quantity be small, the pits may be placed in layers in boxes placed on the ground in a sunny exposure. Sprinkle over each layer a coating of sand. Layers may be four to six deep. Keep constantly moist, but not soaking. As the young plants appear above ground, they should be carefully removed and planted in nursery rows three feet apart. A cloudy day is most suitable for this work.

Walnut. The culture of the Walnut is the same as for all stone fruits. The seed may be planted in beds, during winter or spring, covering about one inch deep, and kept moist, but not wet, until they

germinate, which will be in about three or four weeks, according to the temperature.

As soon as they crack and show the sprout, they should be transplanted to the nursery rows, four and one-half to five feet apart, and six inches apart in the row. They will grow the first year without irrigation six to twelve inches, and with irrigation six inches to four feet; the second year from four to eight feet without irrigation, and about the same with it. They make a better tree to plant where irrigation is not practiced.

If ordered by mail 10 cents, per pound additional will be charged to cover postage. Prices subject

Palms and Other Decorating Plants.

As many of the seeds of this class of plants are not reliable unless fresh, and as the varieties reach us very irregularly from the collectors, we trust our customers will not feel dissapointed if they do not receive all of the varieties they may order; we, however, promise to book such varieties which we cannot supply, and forward promptly upon arrival. As it is impossible to test the vitality or genuineness of this class of seed, we cannot hold ourselves in any way responsible for the results of crops. As many varieties of Palms take a long time to germinate, we advise patience and careful attention to attain successful results.

PALM SEEDS.

Palms are among the finest and handsomest of all plants. In a young state they do not show their distinctive characters.

their distinctive characters.		
· Pri	ce per seeds.	Price per 100 seeds.
Areca. A genus of elegant pinnate-leaved Palms, which are widely distributed over the earth, some of the species being found in the East Indies, while others occur in the West; they exist also in the Islands of the Mauritius and its dependencies, in the Island of Madagascar, in New Zealand and in Australia		
Bauerii [Seaforthia Robusta]. Not very hardy in this climate, except under	05-	00
glass. Native of Norfolk Island	25c	.00
stand frost. Native of Mascareen Islands (see cut).	25c	2.00
"Rubra, a fine plant for the decoration of apartments, or any situation where a graceful plant is required; the leaves are pinnate and arching, in a young state		
bright red, changing with age to dark green. Native of the East Indies; not hardy out of doors.	25c	2,00
" Sapida, a handsome, hardy Palm, very similar to Kentia. Valuable for lawn		
planting. Native of New Zealand.	25c	2.00
Caryota Urens [Himalayan Palm]. Native of India, ascending the Himalayas to an altitude of 5,000 feet, attaining a considerable height, though the temperature sinks in the cooler season to 40 degrees Fahrenheit. This Palm is perfectly hardy in this climate and is well suited for lawn planting or for pot culture. Chamærops. The various species of Chamærops are found scattered through Northern Asia, Northern Africa, North America, and the south of Europe. Leaves fan-shaped; fruit a berry and one-seeded.	25c	2.00

30 feet; leaves fan-shaped; trunk enclosed by a dense mass of rough		
fibres. Native of the East IndiesPer oz., 25c; Per lb., \$2.00.		
"Humilis [Dwarf Fan Palm]. An extremely handsome plant, Native of Southern Europe		
Cocos. An elegant genus of a noble order, many species of which grow to majestic pro-		
portions		
"Australis [Brazilian Palm]. One of the hardiest of all palms, hardier than even the Date Palm; withstanding, unprotected, a cold at winch oranges and lem-		
ons are injured or destroyed	40c	3.00
"Bonnetii. A beautiful Palm for decorative purposes; graceful in appearance.	10-	9.00
Thrifty grower	40c	3.00
one of the most desirable of pinnate-leaved palms	40c	3.00
" Plumosa. This species attains considerable size, rising upon a stout, straight		
column-like stem some 40 or more feet in height. Fruit drooping; bunches of waxy flowers; which are succeeded by quantities of orange-colored nuts; en-		
closed in an edible pulp, in size about as large as a chestnut. Leaves are pin-		
nate. Native of Brazil; does well out of doors in this climate	30c	2.50
resembling a large plume. Native of Brazil	50c	4.00
"Weddelliana. This is perhaps the most elegant Palm we have in cultivation.		
The stem is slender, and clothed with a quantity of black, netted fibres; leaves are from 1 to 4 feet in length, or more, and beautifully arched. For table dec-		
oration there is no Palm to compare with it. Native of South America	50c	4.00
Corypha Australis [Livistona Australis]. Native of Australia; hardy	25c	2.00
Erythea Armata [Brahea Glauca]. "Blue Palm." One of the most elegant Fan Palms,	100	2.00
from the islands off Lower California. Leaves glaucous blue. Hardy Edulis [Brahea Edulis]. A rapid growing variety from the Guadaloupe Islands.	40c	3.00
Fan shaped leaves, bright green. Hardy	40c	3.00
Geonoma Compacta. A Dwarf decorative Palm, quite hardy	20c	1.50
Kentia Belmoreana. This fine Palm is a valuable addition to our collections; its leaves		
are pinnate, dark green, and so beautifully crisp as to gain for it the name of the "Curly Palm." It is very elegant and graceful in habit, a native of Lord		
Howe's Island, where it attains a height of 40 feet	40c	3.00
"Canterburyana. This is a truly handsome species, native of Lord Howe's Island, with pinnate leaves, and a very robust habit. It is called in its native country		
the "Umbrella Palm." It is an exceedingly ornamental plant, and well adapted		
for decorative purposes	50c	5.00
"Fosteriana. In its native country this plant is known as the Thatch Palm, on account of its leaves being used for thatching houses. It is a robust-growing spe-		
cies, often attaining a height of from 40 to 50 feet. Leaves pinnate, and very		
deep green; native of Lord Howe's Island	50c	4.00
tinct in its native habitat		10.00
Latania Borbonica. Native of the Isle of Bourbon. Leaves large, fan-shaped, armed ed-	,	
ges, and enveloped at the base in a net work of brown, fibrous tissues. It is a beautiful		
lawn plant, and when grown in large tubs or pots, this Palm is the one best suited and most, largely used for the decoration of hotel verandas; hardyOz., 25c; 1b., \$2.50		
Oreodoxa Regia [Royal Palm]. Native of Cuba. This noble plant attains a height of 60		
feet. Leaves pinnate. Is largely grown for house decoration, but can scarcely be con-		
sidered hardy out of doors here.	15c	.75
Phœnix Canariensis. (See cut). An elegant and most hardy variety of the Date Palm, much used around Los Angeles for Lawns. Very handsome and durable	15c	1.00
" Dactylifera. The Date Palm; is an erect, handsome Palm. Native of Northern	100	2.00
Africa and Tropical Asia, where the Palm attains a height of eighty feet. Lives		
to a great age, and yields the Date fruit of commerce. Hardy. Per oz., 10c; 1b., 50c.		
" Reclinata. A very fine, large-growing species. Leaves pinnate. Largely used		
in Nice, Cannes and in the south of France for avenues, also the best for that		
purpose here, as it will stand severe frosts. A native of the Cape of Good Hope. Hardy	20c	1.50
"Rupicola. This is one of the most exquisitely graceful Palms, and in elegance		
takes a similar place to that of Cocos Weddelliana. It is of acaulescent habit, with wide-spreading, arching, pinnate leaves; a most valuable acquisition.		
Native of the East Indies. Hardy	20c	1.50
'Sylvestris. This is sometimes called the Wild Date. It resembles Phoenix Dacty-		
lifera somewhat, but is more lax in its growth. Very hardy, but not to be com- pared with P. Dactylifera or Reclinata. Native of the East Indies	20c	1,50
"Tenuis. This is a very hardy, elegant and desirable variety of Date Palm, with		
long, bright sea green leaves; much used here for lawn planting	20c	1.50

10	ice per	Price per 100 seeds
Ptychosperma Alexandræ [The Alexandra Palm]. This is an extremely handsome Palm,		
although a somewhat slender-stemmed species. Leaves pinnate and beautifully		
arched, light green. Native of Australia, where it attains a height of 100 feet. This		
variety will not stand much frost, but is very ornamental for pot culture	25c	2.00
Sabal Adansonii [Dwarf Palmetto]. Extremely slow-growing species, very seldom hav-		
		1.50
" Palmetto [Cabbage Palm]. A native of our Southern States; it attains a height of		
50 feet, with a diameter of 12 to to 15 inches. The timber is said to be valuable in		
ship building, being indestructible in salt water, and not attacked by the teredo.		
The leaves are five or six feet long, and are used in the manufacture of hats (palm		
leaf), baskets and mats; the young unexpanded leaves constitute one of the most	20c	1.50
delicious vegetables for the table	200	1.50
of 80 to 100 feet. Though naturally a tropical Savannah Palm, it has proved		
even hardier than the Orange	20c	1,50
Seaforthia Elegans. One of the most beautiful of the Palm family, and one of the finest	200	1.00
subjects in cultivation for the conservatory, greenhouse or sub-tropical garden. Height		
20 feet. Leaves from two to ten feet in length, dark green. It stands quite a low tem-		
perature, Native of New South Wales.	20c	1.50
Washingtonia Filifera. Well known California Fan Palm, which also goes under the names		
of Pritchardia Filamentosa, and Brahea Filamentosa. Very hardy.		
Oz., 10c; lb., \$1.00		
"Robusta. A robust Fan Palm, similar to Washingtonia Filifera, but with		
smoother, and darker green leaves, and without threads. Per oz., 25c; lb. \$	2.50.	

SEEDS OF DECORATIVE PLANTS.

Agaves. Six fine varieties, viz., Deserti, Lechequilla, Palmeri, Schottii, Shawii, Virginica, each per pkt., 25c. One packet of each of above varieties for \$1.00.

Dracæna Indivisa.

Dracæna Amabilis. The ground color of the leaf is glossy green, be-coming beautifully marked and suffused with pink and creamy white \$1.50 Australis. [Cordyline]. A palmlike tree growing to a considerable height; the stem is stout, leaves from two to three feet in length, oblong, lanceolate and bright green; splendid for avenues, native of New Zealand. Per pkt., 25c.; oz., \$1.00. Draco. Yields the dragon's blood resin; the stem of this species is stout at the base; leaves are closely set, eighteen inches in length and two broad, thick and fleshy, dark green, and ending in a long, thin unarmed point. Native of South America; hardy. Pkt. 25c; 1000 .75 seeds, \$5.00. [Cordyline Indivisa]. Indivisa. (See cut). Sometimes called Dracæna Stricta. A most graceful palm-like tree, suitable for decoration either in or out of doors. Fine for avenues, Native of New Zealand. Oz. 40c; 1b. \$4. .20 Dracæna Indivisa Lineata...Oz., \$1.25 .25 Indivisa Lineata Rosea....Oz., \$1.50 Latifolia Major, per 1000 seeds, \$3.00 .40 Veitchii. A beautiful variety, per .25 1000 seeds, \$2.00.....

2.50

Y	(uccas. Six fine varieties, viz: Alba Marginata, Brevifolia, Clistocarpa, Elata, Truncata	
	and Whippleyi, each per pkt., 25c. The collection of six varieties for \$1.00.	
Y	Yucca Quadricolor. A large and magnificent kind. The upper surface creamy yellow, in	
	the centre tinged with crimson and orange yellow, and broadly bordered with	
	dark shining green. Native of Mexico. Hardy1000 seeds, \$2.00	.25

Musa Ensete.

Agricultural and Horticultural Requisites. INSECT, BLIGHT AND VERMIN DESTROYERS.

Buhach. [Persian Powder]. It is resinous, impalpable and non-poisonous, and kills all sorts of insects and worms by filling up the pores and acting on the skin. It is so fine it penetrates hidden crevices when blown on with a gun or bellows, and many Southern cabbage growers say it is the only effectual remedy for the cabbage worm. Apply when everything is dry, as moisture destroys its properties. Per lb., 75c. [Special price given for large quantities.]

Cole's Insect Destroyer. For mealy bug, green fly, red spider, scale, etc. One careful application with atomizer will be found effective; will not injure the most delicate plant. Per pint bottle, \$1.00. Fir Tree Oil. This insect destroyer has proved to be one of the most reliable for red spider, green fly,

mealy bug, scale, ants, thrip, onion fly, caterpillar, slugs, blight, araucaria scale, etc.

Dilute in the proportion of 1 pint to 20 gallons of water, and apply with an ordinary syringe, or by dipping the the plants. Price, per ½ pint, 50c. [Larger quantities at special prices.]

Flour of Sulphur. American. Prevents and cures mildew on Roses, Grapes, etc. Apply with a gun or bellows while the leaves are damp. Price, per 1b., 5c; per 100 lbs., \$2,50.

""

Imported, French. Of greater strength than the preceding. Price, per lb., 10c; per 100 lbs., \$4.50.

Genuine Paris Green. Unexcelled for potato bugs and other insects that eat foliage. Price, in 1 lb.,

2 lb. and 5 lb. boxes, 35c per lb. [Larger quantities at special prices.]

Hammond's Slug Shot. An impalpable powder, containing ingredients that will destroy the cut worm, potato bug, chinch bug, rose bug, rose slug, curculio, and all lice, worms or caterpillars upon cucumbers, squash or grape vines, tobacco, cotton or egg plant, currants, fruit or ornamental trees, and all shrubs and flowering plants. It is an excellent fertilizer; plants upon which it is used will grow and look much finer than those upon which it is not. It contains nothing injurious to domestic animals, and does not deteriorate by age.

On low-growing plants it should be dusted on with a very fine sifter. On tall Shrubs and Ttees it should be applied with the Double and Single Cone Bellows. Price, per 1b., 10c; per 100

lbs., \$7.50.

A fluid for preventing and destroying mildew. One pint is sufficient for 18 Mildew Preventive. gallons of water. Apply with an ordinary or bellows syringe. Price, per bottle, 75c.

Tobacco Dust. Kills green and black fly, etc. To be dusted or blown on the foliage while moist.

Price, per lb., 20c.

Tobacco Soap. Makes an excellent wash for plants and trees infested with green fly, lice and eggs of

insects. Dissolve 2 ounces in a gallon of water. Price, per lb., 30c.

Tobacco Stems. For fumigating plants infested with green fly. Price, per sack, 50c.

Whale Oil Soap. Makes an excellent wash for trees and plants, kills insects and eggs on the bark.

Price, per lb., 15c; 2 lbs., 25c. [Larger quantities, price on application.]

INSECTICIDE APPLIANCES.

SPRAY PUMPS.

The Little Climax Sprayer. (See cut.) Made of malleable iron and brass, the pump being firmly bolted to a strong iron base, supported by three removable gas-pipe legs. We furnish with this pump four feet of ¼-inch cloth insertion, rubber tubing and two climax nozzles; also, suction hose,

Little Climax Sprayer.

Climax Pump Sprayer, No. 2.

as shown in the cut, to draw the liquid from the bucket or other vessel, as the case may be. also furnish the rod for holding the hose, as shown in the cut; with this the Spray may be thrown straight upward, out at any angle desired, or horizontally, without touching the hose or turning a

screw. We especially recommend this pump for spraying in greenhouses, flowers and shrubs on the lawn, or for garden and small orchard work. Price, complete, boxed for shipping, \$12.50.

Climax Pump Sprayer No. 2. (See cut.) Of similar material to the above. It can be attached to any kind of vessel or tank by means of our brass connections, in ten minutes; or the suction hose can be dropped into a barrel, trough or cistern with equal success. We sell this pump complete, with twenty feet of hose, sixteen feet discharge, four feet suction, two nozzles, and the necessary connections for it. Similar in appearance to Climax Pump No. 3, with the exception of being a little lighter and having but one discharge orifice. Price, complete, boxed for shipping, \$17.50.

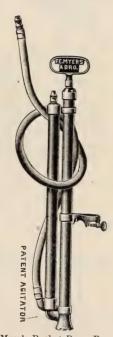

Climax Pump Sprayer No. 3. (See cut.) Valuable for orange orchards, etc. It has two discharge orifices, and is supplied with two lengths of discharge hose, each 16½ feet long, and four nozzles. This pump can be used in all cases where a spray or solid stream is desired, and is capable of throwing a spray nearly as fine as mist, twenty feet in the air, or a solid stream fifty feet. A single hose may be used at a time, if desired, by unscrewing the other hose and attaching cut-off furnished with pump. This is one of the most powerful and easy working pumps on the market. We warrant all of the above machines. Price, complete, \$25.00. Extra Nozzles for either of the above, \$1.50 each.

The "Daisy" Pump. A cheap, effective pump for spraying chicken houses, and for use in small Gardens. Made of lacquered tin. Price, \$1.50 each.

Lewis's Combination Force Pump. Endorsed by all leading entomologists. Will thoroughly spray a ten-acre orchard in a day. It makes three complete tools, viz.: a Combination Force Pump, an Agricultural Syringe, also a Veterinary Syringe. Made of brass, and will throw water fifty feet. Price, complete, \$4.50.

Climax Pump No. 3.

Myer's Bucket Brass Pump.

Mver's Bucket Brass Pump. (See cut.) So arranged that all the labor of pumping is done on one downward stroke, thereby obviating the use of a foot rest, making it of easy working, with an extraordinary force. Made of the best brass, which material is unaffected by the arsenites used in spraying formulas. Invaluable for washing windows, extinguishing fires, and all spraying and syringing purposes. Will throw a stream of water 50 feet. Price, with agitator, hose, and combination fine or coarse spray, and solid stream nozzle, complete, \$3.50 each.

Same Pump as above, with solid steam, sprinkler and vermorel nozzle. Price, \$4.00 each. An 8-foot Pipe Extension is necessary with either of above Spray Pumps to spray large trees.

"Planet Jr." Labor Saving Garden Tools, FOR HAND USE.

These are the most perfect garden tools made, and have long been the most popular. They are known the world over, and beyond question are the most complete in equipment and most practical and labor saving in the field that have yet been invented. Our special "Planet Jr." Catalogue, fully illustrating and describing the sorts of work accomplished, free on application.

Attachments and parts of the different tools catalogued can be supplied to customers at short

notice

No. 0

No. 2

The "Planet Jr." Double Wheel Hoe. (See cut.) Cultivator, Rake and Plow combined. This exceedingly useful and popular tool has this season the extensive outfit shown in this illustration.

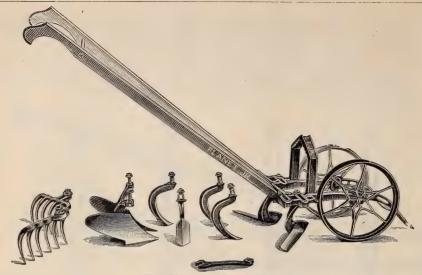

The "Planet Jr." No. 2 Seed Drill. This standard drill holds two and one-half quarts. It sows all garden seeds accurately any desired thickness or depth. It opens, drops, covers and rolls down and marks the next row, all at one passage, in the most perfect and reliable manner. Price, \$9.00.

The "Planet Jr." Single Wheel Hoe. Cultivator, Rake and Plow combined. Price, \$6.00.

The "Planet Jr." Combined Drill. Wheel Hoe, Cultivator, Rake and Plow. (See cut.) This tool is unquestionably the most popular, as it is the most perfect machine of its kind made. It is unrivalled in design, finish. convenience and capacity for work. As a seed drill it is the same as the No. 2, except in size; it holds one quart. The tools sent out with each machine are shown in the cut. Price, \$11.00.

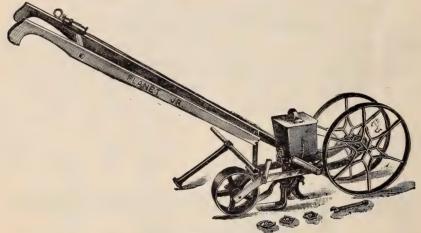

The "Planet Jr." Hill Dropping Garden Seed Drill. (See cut.) For Rows or Hills. This machine

not only sows in rows, but in hills. It opens, sows, covers, rolls down, and marks the next row, all at one operation. Price, \$11.00.

The "Planet Jr. ' Double Wheel Hoe.

The "Planet Jr." Combined Hill Dropping and Fertilizer Drill. This machine will not only do all that the preceding one will do, but at the same time sow fertilizers either above or below the seed, as wanted, and in any required quantity. Price, \$16.00.

The "Planet Jr." Hill Dropping Garden Seed Drill.

The "Firefly" Wheel Garden Plow. The "Firefly" Plow has given great satisfaction, and is now much improved in strength and design. By going twice in each furrow the ground can be plowed up in the spring ready for planting. In many gardens it will save its cost twice a year. Price, \$2.50.

The "Firefly" Single Wheel Hoe, Cultivator and Plow Combined. This neat and convenient machine is a prime favorite, light, strong and adjustable to a great variety of work. The tools supplied with it are: One pair of Curved Point Hoes, one pair of Narrow Cultivating Teeth, one wide Cultivating Tooth and one large Garden Plow. Price, \$5.00.

The "Planet Jr." Grass Edger and Strawberry Vine Cutter. This perfect little tool does either

straight or curved work most accurately, edging at the desired angle and at the rate of a mile an hour. It should be a constant companion of the Mower, as it neatly finishes the lawn, after the Mower has done its best. Strawberry growers will find it a rapid and perfect tool for cutting off surplus runners, Price, \$3.50.

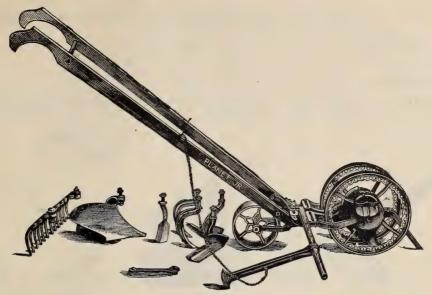

'PĿ&NET JR.'' HORSE IMPLEMENTS.

The "Planet Jr." (All Steel) Horse Hoe and Cultivator Combined, with lever wheel. When

reversed is a Corn Hiller. Price, \$10.00.

The "Planet Jr." Nine-Toothed Horse Hoe and Cultivator (combined). Price, \$16.00.

The "Planet Jr." Beet Growers' Horse Hoe. This admirable tool has a 1¾-inch cultivator tooth, two 6-inch hoes, a 12-inch special flat sweep, and a pulverizer. The latter is a very useful attachment, levelling and finishing the surface, and killing small weeds. Price, \$10.00.

The "Planet Jr." Combined Drill, etc.

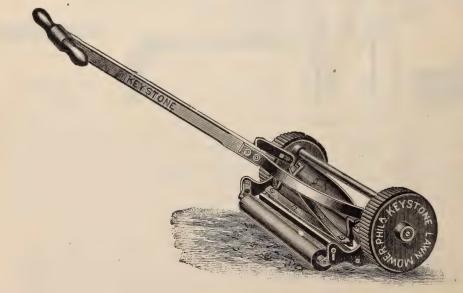

The "Planet Jr." Double Celery Hiller. Price, \$12.00. The "Planet Jr." Single Celery Hiller. Price, \$9,00. The "Planet Jr." Irish Potato Digger. Price, \$16.00.

THERMOMETERS.

(These cannot be sent by mail.)

We carry a full line of Household, Greenhouse, and Dairy Thermometers. (See cuts).

Prices on application.

Fertilizers.

Gypsum, or Land plaster. [Sulphate of Lime]. We strongly recommend the use of this on all black alkali land, as it is the best leacher we know of. In 100-lb, bags, 75c; per ton, \$10.00.

Pure Granulated Bones, for lawns, etc. We warrant them to be pure and unadulterated. Recommended for plants and fruit trees. Per 100 lbs., \$2.50, larger quantities, price on application.

Nitrate of Soda, or Chili Saltpetre. This is a fertilizer that should be used with a great deal of care, as, if used in excess, it is likely to kill the plants, we, therefore, advise it only to be used in small quantities. Its effect is immediate. In applying it to pot plants, dissolve a tablespoonful in one gallon of water and use it every two weeks. The ammonia in this salt, is about 20 per cent. Per 100 lbs., \$3.00; per ton, at market rates.

Lawn Fertilizer. Our own mixture. To keep a good lawn in this climate it is absolutely necessary that it should be irrigated daily. As many coarse water grass seeds are apt to be shed, it behooves all owners of land to supply to the cultivated grasses (mostly Kentucky Blue Grass) the invigorating power they need. This want is amply fulfilled by our own Lawn Mixture. 15 lbs, will fertilize 25

by 25 feet, or its equivalent, 400 lbs to 1 acre. Per lb., 5c; per 100 lbs., \$3.00.

Poultry and Cattle Foods and Remedies.

Common Sense Egg Food. Directions for use accompany each package. Price, in bulk, 15c per lb.; per 100 lbs., \$12.50; 2½-lb. packages, 50c; 6-lb. packages, \$1.00.

Morris' Poultry Cure. Endorsed by all who have used it as the best remedy for the various diseases to which fowls are subject. ½-lb. packages, 25c; 1-lb., 50c; 2-lb., \$1.00. Special prices for large quantities on application.

Pure Ground Bones For Chickens, per 1b., 5c; per 100 lbs, \$2.50.

Ground Oyster Shells for Poultry, per lb., 5c; per 100 lbs., \$2.50.

Linseed Meal, or Ground Flax Seed, for poultices, mashes, etc. Pure. 4 lbs. for 25c; \$5.00 per 100 lbs.

Oil Cake Meal. Directions for feeding.

For Young Cattle—From one to two years old, 3 to 5 quarts per day, in two feeds,

For Spring Calves-From 1 to 3 quarts per day.

Sheep—One pint of meal to each pound of oats fed, or a larger proportion of Meal it preferred.

Horses-A quart to a feed with oats or corn.

Pigs—From 1 to 3 quarts in a feed, according to age and size. Prevents cholera.

From 6 to 7 quarts (or lbs.) of this Meal per day, in two feeds, morning and evening, should be fed to cows giving milk, and to steers intended for beef. Mixed with water, and allowed to stand twelve hours before using, it gives the best results, but may be fed dry. Stock not accustomed to be fed on the Oil Cake Meal should have it at first mixed with bran or corn meal. In a few days they will eat it well alone. 7 lbs for 25c; \$2.25 per 100 lbs.

PAMPAS PLUMES.

(See Cut.)

No. 1. Size, 24 to 36 inches in length, per doz., \$1.00.
No. 2. Size, 18 to 24 inches in length, per doz., \$.50.
Larger quantities priced on application.
